This section depicts a portion of the significant methods involved in recombinant DNA innovation at the core of which is DNA cloning.

DNA CLONING

Since DNA atoms are made out of just four nucleotides, their physical and compound **properties** are practically the same. A clone is a population of cells that came from a single **original** cell and will all have the same genetic make-up if there is no mutation.

In the examples we will present, the fundamental method for cloning a gene is to introduce DNA into **bacterial** cells using the genetic material from the cell of interest.
