$$16 + 28(n - 1) = 1752$$

$$1736 = 28(n - 1)$$

$$62 = n - 1$$

$$n = 63$$

Then $T_7, T_{11}, T_{15}, \dots, T_{251}$ are divisible by 4, thus each 4th term is divisible by 4.

Daarna is $T_7, T_{11}, T_{15}, \dots, T_{251}$ deelbaar deur 4, d.w.s. elke 4^{de} term is deelbaar deur 4.

$$\therefore \text{number of terms divisible by 4 will be} = \frac{251 - 3}{4} + 1 = 63$$

$$\therefore \text{aantal terme deelbaar deur 4 sal wees} = \frac{251 - 3}{4} + 1 = 63$$

Making Presentation Math Computable André Greiner-Petter, 2022-12-31 This Open Access book addresses the issue of translating mathematical expressions from LaTeX to the syntax of Computer Algebra Systems CAS Over the past decades especially in the domain of Sciences Technology Engineering and Mathematics STEM LaTeX has become the de facto standard to typeset mathematical formulae in publications Since scientists are generally required to publish their work LaTeX has become an integral part of today's publishing workflow On the other hand modern research increasingly relies on CAS to simplify manipulate compute and visualize mathematics However existing LaTeX import functions in CAS are limited to simple arithmetic expressions and are therefore insufficient for most use cases Consequently the workflow of experimenting and publishing in the Sciences often includes time consuming and error prone manual conversions between presentational LaTeX and computational CAS formats To address the lack of a reliable and comprehensive translation tool between LaTeX and CAS this thesis makes the following three contributions First it provides an approach to semantically enhance LaTeX expressions with sufficient semantic information for translations into CAS syntaxes Second it demonstrates the first context aware LaTeX to CAS translation framework LaCAST Third the thesis provides a novel approach to evaluate the performance for LaTeX to CAS translations on large scaled datasets with an automatic verification of equations in digital mathematical libraries This is an open access book

Climate Justice and the Economy Stefan Gaarsmand Jacobsen, 2018-05-15 As climate change has increasingly become the main focus of environmentalist activism since the late 1990s the global economic drivers of CO2 emissions are now a major concern for radical greens In turn the emphasis on connected crises in both natural and social systems has attracted more activists to the Climate Justice movement and created a common cause between activists from the Global South and North In the absence of a pervasive narrative of transnational or socialist economic planning to prevent catastrophic climate change these activists have been eager to engage with advanced knowledge and ideas on political and economic structures that diminish risks and allow for new climate agency This book breaks new ground by investigating what kind of economy the Climate Justice movement is calling for us to build and how the struggle for economic change has unfolded so far Examining ecological debt just transition indigenous ecologies social ecology community economies and divestment among other topics the authors provide a critical assessment and a common ground for future debate on economic innovation via social mobilization Taking a transdisciplinary approach that synthesizes political economy history theory and ethnography this volume will be of great interest to students and scholars of climate justice environmental politics and policy environmental economics and sustainable development
