Mathematics Linear B Foundation Paper June 2013:

Sudden arrhythmic death: from basic science to clinical practice Gareth D. Matthews, 2014-10-02 With upwards of 4.5 million deaths worldwide each year and more than one tenth of these occurring in those with no previously documented heart disease sudden arrhythmic death SAD is both a major public health burden and a highly emotive issue for society at large. Recent years have witnessed a marked expansion in our knowledge of the physiology underlying SAD both in the context of hereditary and acquired cardiac disorders. Thanks largely to work in genetically modified animals the growth in our understanding of mechanisms underlying arrhythmia in the hereditary channelopathies has been particularly marked. Our growing knowledge of the fundamental mechanisms underlying SAD has so far failed to spur substantial developments in clinical practice. Despite a large body of work in both humans and animals it remains impossible to confidently identify those at high risk of SAD making pre-emptive therapy a challenge. What is more with the thankful exception of the implantable cardioverter defibrillators and pharmacological agents in very specific situations there has been depressingly little progress in finding new and effective therapies. This Research Topic aims to go some way towards bridging the gap between advances in basic science and the development and delivery of new therapies. It brings together original research contributions and review articles from key opinion leaders in the field focusing on the direct clinical implications of the basic science research now and in the future.

Game-Theoretic Learning and Distributed Optimization in Memoryless Multi-Agent Systems Tatiana Tatarenko, 2017-09-19 This book presents new efficient methods for optimization in realistic large scale multi agent systems. These methods do not require the agents to have the full information about the system but instead allow them to make their local decisions based only on the local information possibly obtained during communication with their local neighbors. The book primarily aimed at researchers in optimization and control considers three different information settings in multi agent systems: oracle based, communication based and payoff based. For each of these information types an efficient optimization algorithm is developed which leads the system to an optimal state. The optimization problems are set without such restrictive assumptions as convexity of the objective functions, complicated communication topologies, closed form expressions for costs and utilities and finiteness of the system's state space.

Shell Structures: Theory and Applications Volume 4 Wojciech Pietraszkiewicz, Wojciech Witkowski, 2017-10-30 Shells are basic structural elements of modern technology and everyday life. Examples of shell structures in technology include automobile bodies, water and oil tanks, pipelines, silos, wind turbine towers and nanotubes. Nature is full of living shells such as leaves of trees, blooming flowers, seashells, cell membranes or wings of insects. In the human body, arteries, the eye shell, the diaphragm, the skin and the pericardium are all shells as well. Shell Structures: Theory and Applications Volume 4 contains 132 contributions presented at the 11th Conference on Shell Structures: Theory and Applications, Gdansk, Poland, 11-13 October 2017. The papers reflect a wide spectrum of scientific and engineering problems from theoretical modelling through strength, stability and dynamic
