## 16. What is an isometric drawing?

A 3D representation where axes are spaced at 120 degrees, showing depth without perspective distortion.

## 17. Why are isometric drawings used?

## 18. Where are isometric drawings commonly found?

In technical manuals, presentations, and instructional diagrams.

## 19. How does an isometric drawing differ from a perspective drawing?

## 20. When is a perspective drawing preferred?

For presentations or marketing to show a realistic, artistic view of a product.

## 21. What is a sectional view in engineering drawing?

A view showing internal features by cutting away part of the object along a plane.

## 22. Why are sectional views important?

They reveal hidden internal structures, like holes or cavities, not visible in external views.

## 23. Where are sectional views typically used?

In drawings of complex parts, such as engine components or assemblies with internal features.

## 24. How is a sectional view indicated?

With a cutting plane line, arrows showing the view direction, and a labeled section view.

## 25. When is a full section view used?

When the entire internal structure along a cutting plane needs to be shown.

## 26. What is a half-section view?

A view combining a sectional view of one half with an external view of the other half.

## 27. Why is a half-section view useful?

It shows both internal and external features in one view, saving space and improving clarity.

## 28. Where is a revolved section view applied?
