

ENGINEERING PEER REVIEW GUIDELINES

Engineering Peer Reviews (EPRs) provide a resource for Product Design Teams (PDTs) to identify potential engineering design and implementation flaws, and increase the probability of success. Applying the EPR process early and throughout the product life cycle affords the maximum advantage in terms of resource efficiency as well as design confirmation and ultimate mission success. When hardware and software design oversights are not screened out early, and at the lowest level of assembly, the risk of non-detection increases, and if detected later, the cost for correction will increase by orders of magnitude. If not detected at all, the results could be disastrous.

EPRs provide "another set of eyes" and a broader experience base for the PDT. They focus on the design and implementation details at levels that system-level reviews can not address. EPRs are a cornerstone of a successful project.

Every experienced review team member brings to the PDT an imbedded list of concerns and knowledge of mishaps, anomalies or near misses; as well as best practices from successful missions. These lessons-learned are the basis for questions and beneficial recommendations for the PDT. Review team members are expected to thoroughly penetrate the subsystem functional design and engineering implementation to expose risk areas.

EPRs should be applied at critical milestones during the design phase, prior to manufacturing or higher level code development, prior to testing, and after completion of subsystem verification. The reviews are essential to assess the integrity of the system design and evaluate subsystem performance relative to the success criteria.

Engineering Peer Reviews address:

- Requirements and Resource Adequacy
- Systems Management Processes
- Design Adequacy: Drawings, Schematics, Analyses, Parts and Materials
- Compliance with Policies, Procedures, Standards and Best Practices
- Implementation Adequacy
- Manufacturing Processes
- Verification Approach: Test, Analyses, Simulation
- Verification Results: Data Adequacy, Observed Margins, Trends, Anomalies
- Claims of heritage from previous missions
- Lessons Learned (applied and learned)
