Corporate DNA Arnold Kransdorff, 2017-05-15. For more than half a century, the developed world has been chasing productivity. It's financed our wealth, but that part of output on which our continued prosperity depends, productivity growth, is petering out. The traditional scapegoat has been the dearth of worker skills. But the worker skills base has never been higher. The other explanation is that it is managers who are not giving full value to their employees. The way they're making decisions is conferring virtually no upside potential, which means they're leaving us wide open for experience-poor competitors to step into our experience-rich shoes. Exactly as Japan did in the 1960s, and the so-called BRICK countries, Brazil, Russia, India, China, especially China and Korea, are threatening now. If creeping uncompetitiveness is not to overtake us, from where are the next round of productivity gains to come from? Identifying some gaping holes in the way managers are taught to manage, this book outlines both the size of the problem and a solution. Businesses and other organizations, the author says, have to substantially raise the quality of their decision-making. For this to happen, they need to be much better experiential learners. And for experiential learning to take place, companies and other institutions have to better manage their corporate DNA. The institution-specific experiences, otherwise known as Organizational Memory (OM), which characterizes any organization's ability to perform, is the single biggest influence on decision-making excellence. It is a factor of production that has already been paid for at great expense, yet is readily discarded in the backwash of the biggest change in workplace practice for more than a century: the actively encouraged flexible labour market. Corporate DNA
