Novel Approaches to Design Eco-friendly Materials Based on Natural Nanomaterials Ai Qin Wang, Wenbo Wang, Hongfei Cheng, Chunhui Zhou, 2019-08-12 Naturally available nanomaterials or those synthesized from natural resources become new favorite of material world due to their advantages of low cost safety and environmental friendliness They are honored as future green materials and widely used in fabricating various functional materials Naturally available materials have been playing an increasingly important role in many fields such as environmental remediation separation catalysis and polymer composites This book collects latest research results on the new composites for environmental application focusing on the study of fabricating functional composites using natural clay minerals Naturally available materials or solid waste or minerals are good precursors for producing adsorbents Composites based on sub bituminous coal lignite and a blend of coal and *Irvingia gabonensis* seed shells the Cl type Mg Al hydrotalcite Cl LDH the hydroxyapatite decorated with carbon nanotube and Zirconium Zr containing silica residue purification ZSR P were proved to have good adsorption capability to Cd II and Pb II ions antibiotic molecules Cd II and fluoride respectively The nano Mg OH 2 loaded carbon cloth showed good separation effect for Eu III and the sodium modified clinoptilolite showed good separation effect for CH₄ N₂ from coal bed gas Also natural nanoclay is an effective precursor for the preparation of inorganic inorganic or organic inorganic nano hybrid materials Using nano kaolinite as a carrier the inorganic inorganic hybrid cobalt blue pigment with excellent color and stability can be obtained by surface co precipitation and in situ calcination crystallization process The intercalation of 7 amino 4 methylcoumarin AMC molecules into the interlayer space of montmorillonite MMT can effectively inhibit fluorescence quenching and improve the detection effectiveness of Cr VI in water The interlayer space of kaolinite can accommodate organic molecules to form an organic inorganic hybrid composite Natural clay minerals are also effective carriers for catalysts Er₃ CeO₂ palygorskite nanocomposites prepared by a facile precipitation method showed excellent desulfurization rate under visible light irradiation The zero valent iron loaded nanoclays composite catalysts can degrade efficiently Rhodamine 6G Rh 6G under microwave irradiation In addition the polymer composites have been developed using natural palygorskite montmorillonite nanosheets or silica nanoparticles as inorganic components which are potential to be used in many fields such as packing biomedicine or rubber With the increasing attention to clay minerals

research methods for the microstructure of clay minerals continue to receive attention. It is no doubt that natural materials have got a booming attention from researchers in mineralogy, materials science, chemistry, energy, biomedicine, and other fields due to their advantages. However, there is still a long way to go to substitute traditional synthetic nanomaterials with natural ones, and there are still theoretical and technological limitations in the design and synthesis of new materials from natural materials. Related theoretical research and technological development require continuous exploration by researchers. This book has collected some recent advances in related research and hopes to play a role in attracting more attention to the construction of functional materials from natural raw materials. It is also believed that through the unremitting efforts of all researchers, the dream of green materials and green preparation processes can be realized.

Buddhist and Taoist Systems Thinking, Josep M. Coll, 2021-07-13
Buddhist and Taoist Systems Thinking explores a radical new conception of business and management. It is grounded on the reconnection of humans with nature as the new competitive advantage for living organizations and entrepreneurs that aspire to regenerate the economy and drive a positive impact on the planet in the context of the Anthropocene. Organizations today struggle in finding a balance between maximizing profits and generating value for their stakeholders, the environment, and the society at large. This happens in a paradigm shift characterized by unprecedented levels of exponential change and the emergence of disruptive technologies. Adaptability thus is becoming the new business imperative. How can then entrepreneurs and organizations constantly adapt and at the same time design the sustainable futures they'd like? This book uniquely explores the benefits of applying Buddhist and Taoist Systems Thinking to sustainable management. Grounded in Taoist and Zen Buddhist philosophies, it offers a modern scientific perspective fundamentally based on the concepts of biological adaptability and lifefulness amidst complexity and constant change. The book introduces the new concept of the Gaia organization as a living organism that consciously helps perpetuate the conditions for life on the planet. It is subject to the natural laws of transformation and the principles of oneness, emptiness, impermanence, balance, self-regulation, and harmonization. Readers will find applied Eastern systems theories such as the Yin Yang and the Five Elements operationalized through practical methodologies and tools such as T-Qualia and the Zen Business model. They are aimed at guiding Gaia organizations and entrepreneurs in leading sustainable transformations and qualifying economic growth. The book offers a vital toolkit for purpose-driven practitioners, management researchers, students, social entrepreneurs, evaluators, and change makers to reinvent, create, and mindfully manage sustainable and agile organizations that drive systemic transformation.
