

LOCALLY COMPACT GROUPS AND LOCALLY MINIMAL GROUP TOPOLOGIES

DIKRAN DIKRANJAN, WEI HE, ZHIQIANG XIAO, AND WENFEI XI

ABSTRACT. Minimal groups are the Hausdorff topological groups G satisfying the open mapping theorem with respect to continuous isomorphisms, i.e., every continuous isomorphism $G \rightarrow H$, with a Hausdorff topological group H , is a topological isomorphism. A topological group (G, τ) is called *locally minimal* if there exists a neighbourhood V of the identity such that for every Hausdorff group topology $\sigma \leq \tau$ with $V \in \sigma$ one has $\sigma = \tau$. Minimal groups, as well as locally compact groups, are locally minimal. According to a well known theorem of Prodanov every subgroup of an infinite compact abelian group K is minimal if and only if K is isomorphic to the group \mathbb{Z}_p of p -adic integers for some prime p .

We find a remarkable connection of local minimality to Lie groups and p -adic numbers by means of the following results extending Prodanov's theorem: every subgroup of a locally compact abelian group K is locally minimal if and only if K is either a Lie group or K has an open subgroup isomorphic to \mathbb{Z}_p for some prime p . In the nonabelian case we prove that all subgroups of a connected locally compact group are locally minimal if and only if K is a Lie group, resolving in the positive Problem 7.19 from [7].

1. INTRODUCTION

Among the generalization of compactness for the realm of topological group (rather than topological spaces), the following one seems to be the most prominent one:

Definition 1.1. A Hausdorff topological group (G, τ) is called *minimal* if for every Hausdorff group topology $\sigma \leq \tau$ on G one has $\sigma = \tau$.

The minimal groups were introduced simultaneously and independently in [7] and [7], where the first examples of noncompact minimal groups can be found. Answering a question of Choquet, Dořtchinov [7] showed that minimality (unlike compactness) is not preserved even under finite direct products. The surveys [7, 7, 7, 7] contain various information on minimal groups. The recent progress in the field of minimal groups is outlined in [7], for minimal topological rings see [7]–[7].

In many of the proofs of the above results, as well as in some proofs of the present paper, the following useful criterion for minimality of dense subgroup is used, where a subgroup H of a topological group G is said to be *essential* in G if H nontrivially meets each nontrivial closed normal subgroup N of G .

Key words and phrases. Lie group, p -adic integers, minimal group, locally minimal group, groups without small subgroups, essential subgroup, locally essential subgroup.

Locally Compact Guidelines:

A Guide to the Classification Theorem for Compact Surfaces Jean Gallier, Dianna Xu, 2013-02-05 This welcome boon for students of algebraic topology cuts a much needed central path between other texts whose treatment of the classification theorem for compact surfaces is either too formalized and complex for those without detailed background knowledge or too informal to afford students a comprehensive insight into the subject Its dedicated student centred approach details a near complete proof of this theorem widely admired for its efficacy and formal beauty The authors present the technical tools needed to deploy the method effectively as well as demonstrating their use in a clearly structured worked example Ideal for students whose mastery of algebraic topology may be a work in progress the text introduces key notions such as fundamental groups homology groups and the Euler Poincar characteristic These prerequisites are the subject of detailed appendices that enable focused discrete learning where it is required without interrupting the carefully planned structure of the core exposition Gently guiding readers through the principles theory and applications of the classification theorem the authors aim to foster genuine confidence in its use and in so doing encourage readers to move on to a deeper exploration of the versatile and valuable techniques available in algebraic topology
