Medical Image Computing and Computer-Assisted Intervention - MICCAI 2003 Randy E. Ellis, Terry M. Peters, 2003-10-29

The 6th International Conference on Medical Imaging and Computer Assisted Intervention MICCAI2003 was held in Montreal, Quebec, Canada at the Fairmont Queen Elizabeth Hotel during November 15-18, 2003. This was the first time the conference had been held in Canada. The proposal to host MICCAI 2003 originated from discussions within the Ontario Consortium for Image-guided Therapy and Surgery, a multi-institutional research consortium that was supported by the Government of Ontario through the Ontario Ministry of Enterprise, Opportunity and Innovation. The objective of the conference was to offer clinicians and scientists a forum within which to exchange ideas in this exciting and rapidly growing field. MICCAI 2003 encompassed the state of the art in computer-assisted interventions, medical robotics, and medical image processing, attracting experts from numerous multidisciplinary professions that included clinicians and surgeons, computer scientists, medical physicists, and mechanical, electrical, and biomedical engineers. The quality and quantity of submitted papers were most impressive. For MICCAI 2003, we received a record 499 full submissions and 100 short communications. All full submissions of 8 pages each were reviewed by up to 5 reviewers, and the 2-page contributions were assessed by a small subcommittee of the Scientific Review Committee. All reviews were then considered by the MICCAI 2003 Program Committee, resulting in the acceptance of 206 full papers and 25 short communications. The normal mode of presentation at MICCAI 2003 was as a poster; in addition, 49 papers were chosen for oral presentation. *Medical Image Computing and Computer-assisted Intervention*, 2002

Ophthalmological Imaging and Applications E. Y. K. Ng, U. Rajendra Acharya, Rangaraj M. Rangayyan, Jasjit S.

Suri, 2014-05-05. Edited by and featuring contributions from world-class researchers, *Ophthalmological Imaging and Applications* offers a unified work of the latest human eye imaging and modeling techniques that have been proposed and applied to the diagnosis of ophthalmologic problems including inflammation, cataracts, diabetic retinopathy, and glaucoma. With a focus on **Ventricular Mechanics in Congenital Heart Disease**, Giovanni Biglino, Adelaide de Vecchi, 2017-08-29. Looking at Horse in Motion, the iconic photograph by E. Muybridge, it is almost possible to hear the horse galloping. The pounding sound of the hoofs hitting the ground like a drum can also echo the rhythmic beating of the human heart. That sound that visceral rhythm reminds us of the link between motion and performance: the perfectly executed stride of the horse, the incredible coordination of multiscale phenomena behind a heart beat. Furthermore, the decomposed sequence in Muybridge's photograph has become a well-known example of breaking motion into its components over time, and as such is reminiscent of those images that are routinely acquired in clinical practice where the heart appears dilating and shrinking in a sequence of snapshots. The investigation of this motion and its subtleties is essential for refining our understanding of cardiac function, and the appreciation of how and when this motion is no longer perfectly executed can lead us to understand functional impairments and provide insight into the unfolding of pathology. In the presence of congenital heart disease (CHD), cardiac

mechanics are altered from single ventricle physiology to conduction abnormalities to different cardiomyopathies it is important to both capture and interpret biomechanical changes that occur in the presence of a congenital defect This special issue in *Frontiers in Pediatrics* now an e book focuses on Ventricular mechanics in congenital heart disease and looks at current knowledge of phenomena such as systolic diastolic dysfunction and current methods chiefly in cardiovascular magnetic resonance imaging and echocardiography to evaluate cardiac function in the presence of CHD and then presents a series of original studies that employ both medical imaging and computational modelling techniques to study specific CHD scenarios
