Using Geogebra to Enhance Learning and Teaching of Basic Properties of Circles for a Secondary 5 Class Cheuk-Hing Lee,□□□,2017-01-26 *College Geometry with GeoGebra* Barbara E. Reynolds,William E. Fenton,2021-01-20 From two authors who embrace technology in the classroom and value the role of collaborative learning comes *College Geometry Using GeoGebra* a book that is ideal for geometry courses for both mathematics and math education majors The book s discovery based approach guides students to explore geometric worlds through computer based activities enabling students to make observations develop conjectures and write mathematical proofs This unique textbook helps students understand the underlying concepts of geometry while learning to use GeoGebra software constructing various geometric figures and investigating their properties relationships and interactions The text allows students to gradually build upon their knowledge as they move from fundamental concepts of circle and triangle geometry to more advanced topics such as isometries and matrices symmetry in the plane and hyperbolic and projective geometry Emphasizing active collaborative learning the text contains numerous fully integrated computer lab activities that visualize difficult geometric concepts and facilitate both small group and whole class discussions Each chapter begins with engaging activities that draw students into the subject matter followed by detailed discussions that solidify the student conjectures made in the activities and exercises that test comprehension of the material Written to support students and instructors in active learning classrooms that incorporate computer technology *College Geometry with GeoGebra* is an ideal resource for geometry courses for both mathematics and math education majors

Using GeoGebra to Enhance Learning and Teaching of Basic Properties of Circles for a Secondary 5 Class □□□,2011 Using GeoGebra in Transformation Geometry : an Investigation Based on the Van Hiele Model Grace Ramatsimele Kekana,2016 This study investigated the use of an advanced technological development free GeoGebra software within the secondary educational setting in four relatively under resourced schools in the Gauteng Province of South Africa This advancement is viewed as having the potential to promote the teaching and learning of complex ideas in mathematics even within traditionally deprived communities The focus in this study was on the teaching and learning of transformation geometry at Grade 9 and attainment was reflected in terms of the van Hieles levels of geometrical

thinking A mixed methods approach was followed where data was collected through lesson observations written tests and semi structured interviews Four Grade 9 teachers from four schools were purposively selected while twenty four mathematics learners six from each school in the Tshwane metropolitan region were randomly selected The teachers lesson observations and interview outcomes were coded and categorised into themes and the learners test scripts were marked and captured The analysis of test scores was structured according to the van Hiele levels of geometric thought development As far as the use of GeoGebra is concerned it was found that teachers used the program in preparation for as well as during lessons learners who had access to computers or android technology used GeoGebra to help them with practice and exercises As far as the effect of the use of GeoGebra is concerned improved performance in transformation geometry was demonstrated

Mathematical Modeling Jonas Hall, Thomas Lingefjård, 2016-06-13 A logical problem based introduction to the use of GeoGebra for mathematical modeling and problem solving within various areas of mathematics A well organized guide to mathematical modeling techniques for evaluating and solving problems in the diverse field of mathematics Mathematical Modeling Applications with GeoGebra presents a unique approach to software applications in GeoGebra and WolframAlpha The software is well suited for modeling problems in numerous areas of mathematics including algebra symbolic algebra dynamic geometry three dimensional geometry and statistics Featuring detailed information on how GeoGebra can be used as a guide to mathematical modeling the book provides comprehensive modeling examples that correspond to different levels of mathematical experience from simple linear relations to differential equations Each chapter builds on the previous chapter with practical examples in order to illustrate the mathematical modeling skills necessary for problem solving Addressing methods for evaluating models including relative error correlation square sum of errors regression and confidence interval Mathematical Modeling Applications with GeoGebra also includes Over 400 diagrams and 300 GeoGebra examples with practical approaches to mathematical modeling that help the reader develop a full understanding of the content Numerous real world exercises with solutions to help readers learn mathematical modeling techniques A companion website with GeoGebra constructions and screencasts Mathematical Modeling Applications with GeoGebra is ideal for upper undergraduate and graduate level courses in mathematical modeling applied mathematics modeling and simulation operations research and optimization The book is also an excellent reference for undergraduate and high school instructors in mathematics

[The Influence of GeoGebra Training on Teachers and Learners in Rural Geometry Classrooms](#) Collen Manganyana, 2020 The aim of this study was to investigate the influence of GeoGebra training on teachers and learners in rural geometry classrooms The conceptual framework that was used in this study was based on the four level training evaluation framework of Kirkpatrick 1996 focusing on the first three levels only while the fourth level was not considered The study was conducted in disadvantaged and under resourced schools situated in the Mpumalanga Province of South Africa This undertaking was considered as a way of promoting what was perceived as a simple but effective method of

teaching and learning with technology The technology enhanced teaching strategy was employed with the anticipation of enhancing the development of geometrical concepts that are seen as too abstract by the majority of learners in resource constrained areas Hence the focus of this study was on the teaching and learning of the properties of triangles and the properties of quadrilaterals in Grade 10 using GeoGebra and traditional methods Within the non equivalent quasi experimental design both qualitative and quantitative approaches were used Four purposively sampled Grade 10 teachers from four schools and their classes comprising of 165 learners participated The data collection involved pre and post tests questionnaires lesson observations and interviews Learners' achievement was measured by outcomes obtained from marked and recorded achievements tests The qualitative data collected from the teachers through questionnaires lesson observations and interviews were coded and categorised into themes This analysis revealed that most participants had positive training experiences and preferred using GeoGebra in the teaching and learning of geometry despite a lack of resources in their schools The findings also showed that there was lack of training workshops that focused on appropriate teachers knowledge and skills that are connected to technological innovations particularly in GeoGebra The quantitative data analysis results showed a significant difference in the mean scores for both groups respectively in favour of learners taught with GeoGebra compared to a chalk and talk method The teachers' implementation of and enthusiasm about GeoGebra had a positive influence on learner achievement Based on the results it was concluded that as a pedagogical tool GeoGebra can work effectively in rural schools where geometry is hardly taught

Empowering Geometry Education by Integrating it with GeoGebra Harinder Mahajan, 2024-07-01 This book provides a comprehensive source for integrating GeoGebra with the objectives of teaching Geometry In this book we will dive deep into GeoGebra's features to visualize geometric objects explore their properties measure their attributes and make conjectures about them make transformations that preserve both shape and size or shape only and prove congruence and similarity of figures by transformations and draw graphs of functions We will delve into various branches of geometry from Euclidean geometry and trigonometry to coordinate geometry focusing on integrating technology seamlessly into the learning process
