

Food Chain

A series of relationships between organisms in an ecosystem that shows where each plant or animal gets its energy from.

consumers, and finally decomposers before being recycled back into the soil for producers to start the cycle all over again.

Ecological pyramids are similar to food chains, although they are slightly more detailed. While a food chain shows a simple flow of energy, an ecological pyramid (also trophic pyramid, Eltonian pyramid, energy pyramid, or sometimes just a food pyramid) shows the stages that energy will flow through.

Each layer of the ecological pyramid is referred to as a **trophic level** and will contain all the different species in the community that fits within the same category. The trophic level is where you will find all of the producers in that ecosystem. All of the grass, trees, flowers, moss, etc. can be found in this category. This is at the bottom of the ecological pyramid because it's the ground floor where energy production within the ecosystem starts.

Ecological Pyramid

Shows the levels of energy flow within a community of organisms.
