| H | 10. Organisms that do not make their own food | J. Autotrophs |

Directions: Answer each of the following questions in a clear and concise manner.

1. Discuss how cells store energy and release energy using ATP. Be specific! Draw the ADP/ATP cycle to help with your explanation. You may need to look this cycle up. This answer requires WORDS and DRAWING.

Cells store energy as ATP by absorbing energy from glucose to attach a 3rd phosphate to ADP. When ATP is used for energy that 3rd phosphate breaks off reverting it back into ADP which can then be recharged again.

2. Describe in your own words what cell respiration is and why it is needed.

Cell respiration is how living cells convert food (glucose) and oxygen into energy that the cell can use (ATP). It is needed because all cells require energy to carry out the basic characteristics of life.
