

## Summary

Construction sites and construction classrooms can pose significant safety and health hazards. Good housekeeping on the site is important to preventing accidents. Safety rules must be observed in dress, moving about the jobsite, and proper handling of potentially dangerous tools and equipment. When working above certain heights, especially on roofs, fall protection devices must be used. Where needed, scaffolds and ladders should be used and able to safely and securely support loads. Excavations must be shored and braced to prevent collapse. To prevent injury, correct lifting and carrying procedures must be observed. Carpenters should have a good understanding of the causes of fires and methods of controlling them. A first aid kit should always be available on the jobsite.
