### Rack installation guidelines

Review the documentation that came with your rack cabinet for safety and cabling information. Before you install the storage subsystem in a rack cabinet, review the following guidelines:

- Two or more people are required to install devices 18 kg (39.7 lb) or heavier in a rack cabinet.
- Make sure that the room air temperature is below 35°C (95°F).
- Do not block any air vents; usually 15 cm (6 in.) of space provides proper airflow.
- Do not leave open spaces above or below an installed storage subsystem in your rack cabinet. To help prevent damage to storage subsystem components, always install a blank filler panel to cover the open space and to help ensure proper air circulation.
- Install the storage subsystem or expansion enclosure only in a rack cabinet with perforated doors.
- Plan the device installation starting from the bottom of the rack cabinet.
- Install the heaviest device in the bottom of the rack cabinet.
- Do not extend more than one device out of the rack cabinet at the same time.
- Remove the rack doors and side panels to provide easier access during installation.
- Connect the storage subsystem or expansion enclosure to a properly grounded outlet.
- Do not overload the power outlet when you install multiple devices in the rack cabinet.
- The storage subsystem or expansion enclosure requires 2 U of vertical space in the rack cabinet.

Use safe practices when lifting.
