Sailor Marine and Airman injured on the battlefield will have the optimum chance for survival and maximum potential for  
functional recovery To achieve this vision in 2006 the JTS implemented programs for data driven trauma system development  
and improvement in addition to the collection of trauma data As part of its data collection efforts the JTS maintains a registry  
of trauma patients who received care at medical treatment facilities MTFs Since 2007 this registry known as the DoD Trauma  
Registry DoDTR has documented demographic injury treatment and outcomes data for all trauma patients admitted to any  
DoD MTF regardless of whether the injury occurred during on going military operations and is the largest military trauma  
data source in the world Development of the DoDTR began during the early years of the Global War on Terror GWOt when  
the need to systematically improve trauma care for combat wounded resulted in the impromptu creation of a demonstration  
registry known then as the Combat Trauma Registry CTR The CTR was constructed by the Center for AMEDD Strategic  
Studies CASS trauma related information was initially abstracted into it from paper medical records received from trauma  
nurse coordinators TNCs at Landstuhl Regional Medical Center LRMC in Germany Shortly after the demonstration program
