Engineering of Glacial Deposits Barry G. Clarke, 2017-07-14 At some time 30% of the world's land mass was covered by glaciers leaving substantial deposits of glacial soils under major conurbations in Europe North and South America New Zealand Europe and Russia For instance 60% of the UK has been affected leaving significant glacial deposits under major conurbations where two thirds of the population live Glacial soils are composite soils with significant variations in composition and properties and are recognised as challenging soils to deal with Understanding the environment in which they were formed and how this affects their behaviour are critical because they do not always conform to classic theories of soil mechanics This book is aimed at designers and contractors working in the construction and extractive industries to help them mitigate construction hazards on with or in glacial deposits These soils increase risks to critical infrastructure which in the UK includes the majority of the road and rail network coastal defences such as the fastest eroding coastline in Europe and most of the water supply reservoirs It brings together many years of experience of research into the behaviour of glacial deposits drawing upon published and unpublished case studies from industry It draws on recent developments in understanding of the geological processes and the impact they have upon the engineering properties construction processes and performance of geotechnical structures Unlike other books on glaciation it brings together all the relevant disciplines in earth sciences and engineering to make it directly relevant to the construction industry

Engineering Geology of Groundwater in Design and Construction: Engineering Group Working Party Report

I.J. Duncan ,U.L. Lawrence,2025-09-16 The majority of ground engineering projects encounter water in one way or another Delays and unforeseen costs inevitably follow when that encounter is unexpected and the impacts can affect a surprisingly large area To understand and manage the risks associated with groundwater expertise is required in the areas of hydrogeology hydrology engineering geology land quality risk management communication and planning In view of the wider context that groundwater plays in support of our society economy and environment this Engineering Group Special Publication has been produced offering best practice guidance and providing a general overview of groundwater in engineering geology including modelling risks and management This book provides a state of the art review and guidance for the management of risks associated with groundwater during design and construction of engineering projects Engineering Geology of Groundwater in Design and Construction is intended to be practical informative and to be of use to a wide spectrum of readers from a diversity of backgrounds and employments

Craig's Soil Mechanics Jonathan Knappett,R.F. Craig,2019-10-11 Craig s Soil Mechanics continues to evolve and remain the definitive text for civil engineering students worldwide It covers fundamental soil mechanics and its application in applied geotechnical engineering from A to Z and at the right depth for an undergraduate civil engineer with sufficient extension material for supporting MSc level courses and with practical examples and digital tools to make it a useful reference work for practising engineers This new edition now includes Restructured chapters on foundations and earthworks the latter including new material on working platforms and collapse of underground cavities sinkhole formation New mobilised stress based deformation methods that can straightforwardly be used with both linear and non linear soil stiffness models and field measurements of shear wave velocity for serviceability limit state design Extended sets of correlations for making sensible first estimates of soil parameters adding deformation based parameters for broader coverage than the Eighth Edition Extended section on robust statistical selection of characteristic soil parameters Greater use of consolidation theory throughout in determining whether actions processes and laboratory in situ tests are drained or undrained Extended chapter on in situ testing adding the Flat Dilatometer Test DMT and interpretation of consolidation parameters from CPTU and DMT testing An updated section on pile load testing Additional worked examples and end of chapter problems covering new material with fully worked solutions for lecturers The electronic resources on the book s companion website are developed further with the addition of two new spreadsheet numerical analysis tools and improvement of existing tools from the Eighth Edition Using these readers can take real soil test data interpret its mechanical properties and apply these to a range of common geotechnical design problems at ultimate and serviceability limiting states

Model Uncertainties in Foundation Design Chong Tang,Kok-Kwang Phoon,2021-03-16 Model Uncertainties in Foundation Design is unique in the compilation of the largest and the most diverse load test databases to date covering many foundation types shallow foundations spudcans driven piles drilled shafts rock sockets and helical piles

and a wide range of ground conditions soil to soft rock All databases with names prefixed by NUS are available upon request This book presents a comprehensive evaluation of the model factor mean bias and coefficient of variation COV for ultimate and serviceability limit state based on these databases These statistics can be used directly for AASHTO LRFD calibration Besides load test databases performance databases for other geo structures and their model factor statistics are provided Based on this extensive literature survey a practical three tier scheme for classifying the model uncertainty of geo structures according to the model factor mean and COV is proposed This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding a concept already adopted in the Canadian Highway Bridge Design Code and being considered for the new draft for Eurocode 7 Part 1 EN 1997 1 202x The helical pile research in Chapter 7 was recognised by the 2020 ASCE Norman Medal
