*Natural Selection Theory in Non-majors' Biology* Dianne Leigh Anderson, 2003

Evolution by natural selection is the dominant and unifying theme in biology, yet many college students hold alternative conceptions about the topic even after completing general biology. To develop effective instructional strategies and track conceptual understanding, it is useful to have a detailed assessment tool easily used with large classes. This study presents the Conceptual Inventory of Natural Selection (CINS), a distractor-driven, twenty-item, multiple-choice test that assesses understanding of ten concepts related to natural selection: biotic potential, stable populations, limited natural resources, limited survival, variation within a population, variation inherited, differential survival, change in populations, origin of variation, and origin of species. Development, refinement, and field testing of individual CINS items are presented, and validity, readability, reliability, and factor analysis of the CINS are described. There was significant correlation between student performance on the posttest CINS and end-of-semester interviews, suggesting that the CINS is a useful classroom tool. The CINS was used as both a pretest and posttest to determine relative difficulty of the concepts among college students. The three most challenging concepts were random origin of variation, how populations change over time due to changing proportions of alleles, and how new species originate. Many students chose distractors including need as a driving force. Results support the use of non-traditional methods as only students in such classes demonstrated any improvement on the CINS posttest. Pre- and posttesting with the CINS was also used to assess the relative effectiveness of using two types of supplemental reading materials: selections from narrative non-textbook sources or from other general biology textbooks in a general biology course. These results suggest that specific content of readings was more important than style of the readings. Implications for teaching both students and pre-service teachers are described.
