whether IMF arrangements can restore access to international capital markets ICM for countries in distress through liquidity and conditionality channels We find that global financial conditions and debt GDP are the most important determinants of access to ICM within the horizon of a typical IMF arrangement Using an event study methodology we show that spreads increase prior to the start of an IMF arrangement and then decrease gradually By exploiting different characteristics of IMF arrangements we find evidence that the reforms implemented under the IMF arrangement as measured by rounds of successful IMF reviews matter more in the medium term than the IMF s role as a liquidity provider These results are consistent with our analysis of 55 credit rating upgrades to ICM access levels which suggests that debt reduction plays the largest role and that IMF arrangements lend credibility to reforms
