Artificial Organic Networks Hiram Ponce-Espinosa,Pedro Ponce-Cruz,Arturo Molina,2013-11-12 This monograph describes the synthesis and use of biologically inspired artificial hydrocarbon networks AHNs for approximation models associated with machine learning and a novel computational algorithm with which to exploit

them The reader is first introduced to various kinds of algorithms designed to deal with approximation problems and then via some conventional ideas of organic chemistry to the creation and characterization of artificial organic networks and AHNs in particular The advantages of using organic networks are discussed with the rules to be followed to adapt the network to its objectives Graph theory is used as the basis of the necessary formalism Simulated and experimental examples of the use of fuzzy logic and genetic algorithms with organic neural networks are presented and a number of modeling problems suitable for treatment by AHNs are described approximation inference clustering control classification and audio signal filtering The text finishes with a consideration of directions in which AHNs could be implemented and developed in future A complete LabVIEW™ toolkit downloadable from the book's page at springer.com enables readers to design and implement organic neural networks of their own The novel approach to creating networks suitable for machine learning systems demonstrated in Artificial Organic Networks will be of interest to academic researchers and graduate students working in areas associated with computational intelligence intelligent control systems approximation and complex networks
