Johnson, Richard Jennings, 2001 CD ROM contains Virtual instruments Examples built in the book Links to NI online catalog *Rheology and Fourier-Transform Rheology on Water-Based Systems* Christopher Klein, 2008 The influence of shear fields on water based systems was investigated within this thesis The non linear rheological behaviour of spherical and rod like particles was examined with Fourier Transform rheology under LAOS conditions As a model system for spherical particles two different kinds of polystyrene dispersions with a solid content higher than 0.3 each were synthesised within this work Due to the differences in polydispersity and Debye length differences were also found in the rheology In the FT rheology both kinds of dispersions showed a similar rise in the intensities of the magnitudes of the odd higher harmonics which were predicted by a model The in some cases additionally appearing second harmonics were not predicted A novel method to analyse the time domain signal was developed that splits the time domain signal up in four characteristic functions Those characteristic functions correspond to rheological phenomena In some cases the intensities of the Fourier components can interfere negatively FD virus particles were used as a rod like model system which already shows a highly non linear behaviour at concentrations below 1 % wt Predictions for the dependence of the higher harmonics from the strain amplitude described the non linear behaviour well at large but not so good at small strain amplitudes Additionally the trends of the rheological behaviour could be described by a theory for rod like particles An existing rheo optical set up was enhanced by reducing the background birefringence by a factor of 20 and by increasing the time resolution by a factor of 24 Additionally a combination of FT rheology and rheo optics was achieved The influence of a constant shear field on the crystallisation process of zinc oxide in the presence of a polymer

was examined The crystallites showed a reduction in length by a factor of 2 The directed addition of polymers in combination with a defined shear field can be an easy way for a defined change of the form of crystallites

Modeling, Programming and Simulations Using LabVIEW™ Software Riccardo de Asmundis, 2011-01-21 Born

originally as a software for instrumentation control LabVIEW became quickly a very powerful programming language having some peculiar characteristics which made it unique the simplicity in creating very effective Users Interfaces and the G programming mode While the former allows designing very professional controls panels and whole Applications completed with features for distributing and installing them the latter represents an innovative and enthusiastic way of programming the Graphical representation of the code The surprising aspect is that such a way of conceiving algorithms is absolutely similar to the SADT method Structured Analysis and Design Technique introduced by Douglas T Ross and SofTech Inc USA in 1969 from an original idea of MIT and extensively used by US Air Force for their projects LabVIEW practically allows programming by implementing straightly the equivalent of an SADT actigram Beside this academical aspect LabVIEW can be used in a variety of forms creating projects that can spread over an enormous field of applications from control and monitor software to data treatment and archiving from modeling to instruments controls from real time programming to advanced analysis tools with very powerful mathematical algorithms ready to use from full integration with native hardware by National Instruments to an easy implementation of drivers for third party hardware In this book a collection of different applications which cover a wide range of possibilities is presented We go from simple or distributed control software to modeling done in LabVIEW from very specific applications to usage in the educational environment
