Learning from the Federal Market Based Reforms William J. Mathis, Tina M. Trujillo, 2016-07-01 Over the past 20 years educational policy has focused on market based reforms and privatization The Every Student Succeeds Act continues this trend shifting authority to states This book examines the evidence on these reforms showing little success and advocating for broader societal investments and evidence based interventions

The Test Anya Kamenetz, 2015-01-06 The anti testing movement now has a guidebook Kamenetz shows how fundamentally American it would be to move toward a more holistic system New York Times Book Review The Test is an essential and critically acclaimed book for any parent confounded by our national obsession with standardized testing It recounts the shocking history and tempestuous politics of testing and borrows strategies from fields as diverse as games neuroscience and ancient philosophy to help children cope It presents the stories of families teachers and schools maneuvering within and beyond the existing educational system playing and winning the testing game And it points the way toward a hopeful future of better tests and happier kids

Sri Lanka Human Capital Development Harsha Aturupane, World Bank, 2021-08-31 Human capital is a central determinant of economic well being and social advancement in the modern world economy The concept of human capital covers the knowledge skills nutrition and health that people accumulate over their lives enabling them to realize their potential as productive members of society Because of the vital importance of human capital for economic growth the World Bank has launched the Human Capital Project HCP which includes the Human Capital Index HCI The objective of the HCP is to accelerate human capital development around the world The HCI is a cross country metric designed to measure and forecast a country's human capital Sri Lanka is a lower middle income country seeking to become an upper middle income country Developing human capital to a new and higher level will be central to achieving this development goal After the country's 26 year secessionist conflict ended in 2009 Sri

Lanka's economy enjoyed rapid growth at an average rate of almost 6 percent between 2010 and 2017 reflecting a peace dividend and a determined policy thrust toward reconstruction and growth. However, in more recent years there have been signs of a slowdown. The economy is transitioning from a predominantly rural economy to a more urbanized one. In the context of the HCP and the HCI, Sri Lanka Human Capital Development analyzes the main achievements and challenges of human capital development in this East Asia and Pacific island country in health and nutrition, including stunting and in education, including the challenges posed by Sri Lankans' low participation in higher education. The report concludes with a look at the importance of building a consensus among the public and other stakeholders to launch an ambitious human capital development program in Sri Lanka.

Neuropsychological Evaluation of the Child Ida Sue Baron, 2018. This updated and expanded edition retains a practical developmental and lifespan perspective for neuropsychological case formulation. Chapters cover the current status, clinical issues, and essential domains and techniques in clinical neuropsychological practice and research, and include case vignettes that explicate brain-behavior relationships in youth from preschool age through adolescence with medical disease or psychological disorder.

Brain Networks for Studying Healthy and Pathological Aging: Mechanisms and Intervention Efficacy Christos Frantzidis, Ana B. Vivas, Panagiotis D. Bamidis, 2020-11-18. Previous studies showed that both healthy and pathological aging are associated with changes in brain structure and function of the mature human brain. The most prominent anatomical alterations are changes in prefrontal cortex morphology, volume loss, and reduced white matter integrity and hippocampal atrophy. Cognitive decline affects mainly the

performance of episodic memory speed of sensory information processing working memory inhibitory function and long term memory It has been also proposed that due to the aforementioned changes the aging brain engages in compensatory brain mechanism such as a broader activation of cortical regions mainly frontal rather than specialized activation Evidence suggests that similar changes occur with pathological aging but to a greater extent In this case information flow is disrupted due to neurodegeneration functional activation of posterior occipito temporal regions is decreased and as a consequence the brain fails to process sensorial input in the ventral pathway and cognitive deficits appear In the last years functional alterations associated with aging have been studied using the mathematical notion of graph theory that offers an integrative approach since it examines different properties of the brain network 1 Organization level 2 amount of local information processing 3 information flow 4 cortical community structure and 5 identification of functional anatomical hubs So graph theory offers an attractive way to model brain networks organization and to quantify their pathological deviations Previous studies have already employed this mathematical notion and demonstrated that age related neurodegeneration is often accompanied by loss of optimal network organization either due to diminished local information processing or due to progressive isolation of distant brain regions They have also found that changes in network properties may be present even in the preclinical phase which could be taken as a biological marker of disease
