

Pythagorean Theorem

Lesson Synopsis:

In this lesson, students model the Pythagorean Theorem concretely using area models while making conjectures for angles. In addition, students explore Pythagorean Triples by constructing triangles and explore the relationships between obtuse, similar triangles, and the Pythagorean Theorem. Students apply the Pythagorean Theorem and Pythagorean Triples in real-world contexts to solve problems.

TEKS:

- G.2 Geometric relations: The student analyzes geometric relationships in order to make and verify conjectures.
- G.2B Make conjectures about angles, lines, polygons, circles, and three-dimensional figures and determine the validity of the conjectures, starting from a variety of approaches such as coordinate, transformational, or automatic.
- G.3 Geometric patterns: The student uses a variety of representations to describe geometric relationships and solve problems.
- G.3B Use inductive and geometric patterns to make generalizations about geometric properties, including properties of polygons, ratios in similar figures and solids, and angle relationships in polygons and solids.
- G.3C Identify and apply patterns from right triangles to solve meaningful problems, including special right triangles (45-45-90 and 30-60-90) and triangles whose sides are Pythagorean triples.
- G.4 Congruence and the geometry of size: The student uses tools to determine measurements of geometric figures and derive measurement concepts to find perimeter, area, and volume in problem situations.
- G.5C Define, extend, and use the Pythagorean Theorem.
- G.7 Identify and the geometry of shape: The student applies the concepts of similarity to justify properties of figures and solve problems.
- G.7C Derive, apply, and justify triangle similarity relationships, such as right triangle ratios, trigonometric ratios, and Pythagorean triples using a variety of methods.
