

EMC VMAX 40K

VMAX 40K high-density configurations support up to 3,200 drives, consuming 33 percent less space, 35 percent less weight, and 27 percent less power compared with 3.5-inch drives.

The EMC® VMAX® 40K storage system delivers unmatched scalability and high availability for the enterprise while providing market-leading functionality to accelerate your transformation to the hybrid cloud. The EMC Quad Virtual Matrix Architecture™ is a unique way to build storage systems that transcends the physical constraints of all existing architectures by scaling system resources through common building blocks called EMC VMAX engines.

A single VMAX 40K engine provides the complete foundation for a high availability VMAX 40K system. Each VMAX 40K contains two VMAX 40K directors and redundant interfaces to the EMC Quad Virtual Matrix™ interconnect. Each VMAX 40K director consolidates front-end, global memory, and back-end functions, enabling direct memory access to data for optimized I/O operations.

VMAX 40K engines are interconnected via a set of multiple active fabrics that provide scalable performance and high availability. VMAX 40K engines can be added non-disruptively to provide linear scale-out of VMAX system resources. The Quad Virtual Matrix is architected to scale to dozens of engines, geographically dispersed throughout a data center, delivering unprecedented scale of infrastructure services under a single point of management.
