Application-driven Quantum And Statistical Physics: A Short Course For Future Scientists And Engineers - Volume 3: Transitions Jean-michel Gillet,2020-06-18 Bridging the gap between traditional books on quantum and statistical physics this series is an ideal introductory course for students who are looking for an alternative approach to the traditional academic treatment This pedagogical approach relies heavily on scientific or technological applications from a wide range of fields For every new concept introduced an application is given to connect the theoretical results to a real life situation Each volume features in text exercises and detailed solutions with easy to understand applications This third volume covers several basic and more advanced subjects about transitions in quantum and statistical physics Part I describes how the quantum statistics of fermions and bosons differ and under what condition they can merge into the classical particle statistics framework seen in Volume 2 This section also describes the fundamentals of conductors semiconductors superconductors superfluids and Bose Einstein condensates Part II introduces time dependent transitions between quantum states The time evolution of a simple two level model gives the minimum background necessary to understand the principles behind lasers and their numerous applications Time dependent perturbation theory is also covered as well as standard approaches to the scattering of massive particles A semi classical treatment of electromagnetic field matter interaction is described with illustrations taken from a variety of processes such as phonon scattering charge distribution or spin densities The third and

last part of the book gives a brief overview of quantum electrodynamics with applications to photon absorption or emission spectroscopies and a range of scattering regimes There follows a short introduction to the role of multiphoton processes in quantum entanglement based experiments

Don't Wait for the Next War Wesley K. Clark,2014-09-16 With the end of the Cold War came not the end of history but the end of America s sense of its strategic purpose in the world Then after a decade of drift the US was violently dragged back into international conflict Its armed forces responded magnificently but its leaders objectives were substantially flawed We fought the wrong war twice for reasons that were opaque and few American citizens understood the cause for which their sons and daughters were fighting and dying War is a poor substitute for strategic vision and decisions made in the heat of imminent conflict are often limited by the emotions of the moment In Don t Wait for the Next War Wesley K Clark a retired four star general of the US army and former Democratic candidate for president presents a compelling argument for continued American global leadership and the basis on which it can succeed a new American strategy America needs both new power and deeper perspective The platform for American leadership is to use America s energy resources to spark sustainable economic growth building new strength to deal with pressing domestic issues like the deficit as well as the longer term challenges to US security terrorism cyber threats the next financial crisis China s rising power and climate change Such a strategy is not only achievable but essential and it is urgently needed This is the true test of American leadership for the next two decades but it must start now so America has the power and vision to deal with the acute crises that will inevitably come in the Mideast Europe or Asia
