Chapter 7

In chapter 7 of Biology 102, students should focus on key concepts such as cell structure and function, cell division, and DNA replication. Important events to remember include the discovery of DNA and the development of genetic engineering. Notable figures include James Watson, Francis Crick, and Rosalind Franklin.

Cell Structure and Function:

Cells are the basic units of life, and all living things are made up of one or more cells. Cells come in a variety of shapes and sizes, and they have a variety of functions. The three main parts of a cell are the cell membrane, the nucleus, and the cytoplasm.

Cell Division:

Cell division is how cells reproduce. There are two main types of cell division: mitosis and meiosis. Mitosis is the type of cell division that produces cells for growth and repair. Meiosis is the type of cell division that produces sperm and eggs.

DNA Replication:

DNA replication is how cells make copies of their DNA. DNA replication occurs during cell division. DNA replication is a complex process, but it can be summarized in three steps: initiation, elongation, and termination.
