### Condition

Customers may comment on various issues with their vehicle related to high or low speed data bus traffic. These concerns may be widely varied, but some of the known issues are listed below.

The information contained in this bulletin is not meant to single out any one device or symptom, but to provide additional information that may be useful for diagnosing issues that do not have other diagnostic methods to identify the root cause.

**Note:** This bulletin is being written with a focus on full size truck and full size van along with other fleet vehicles, but could apply to any vehicle.

### Known Symptoms (not specific to any one device)

- The radio may not shut off after shutting down vehicle.
- Bus or LAN traffic may stay active leading to a discharged vehicle battery.
- Problems reprogramming modules either because of interference or the device will not allow the bus to power down.
- ONSTAR® may lose the ability to provide diagnostic data.

### Cause

If nothing else can be identified as the root cause of the issue after normal diagnostics as found in SI, check for a device plugged into the Assembly Line Diagnostic Link (ALDL) or Data Link Connector (DLC) for tracking and/or maintenance interval scheduling. Monitoring devices, along with other electronic accessories such as aftermarket cruise control, or police speed checking devices (RADAR or LIDAR) may cause one or more of the concerns listed above.

Many of the problems described could be caused by an open connection on the HSCAN bus. Example: if the device only makes connection with one CAN +, then it will cause bus errors and erratic ECU behavior.

These devices may be removed by the customer for use in another vehicle while theirs is brought in for service. The intent of this bulletin is to identify a potential source of concerns that do not have other diagnostic methods to identify them. The examples below illustrate some of the devices encountered.
