### QUESTIONS

- Q1. The total life-cycle costing approach is a comprehensive way for managers to understand and manage costs through a product's design, development, manufacturing, marketing, distribution, maintenance, service, and disposal stages. It differs from other processes and accounting, all costs along the value chain. Using this approach can lead to substantial cost savings. - Q5. During the post-sale service and disposal stage, organizations have to consider both the costs involved in providing service to products as well as there are both benefits of customers, as well as the costs of ultimately disposing of the product. The following three advantages typically occur during this stage: (1) capital growth from the time that the product is stopped through the growth stage of its sales, (2) revenues from the peak of sales to the point of
