

## Introduction Operations Management

**Operations** is that part of a business organization that is responsible for producing goods and/or services.

**Goods** are physical items that include raw materials, parts, subassemblies such as motherboards that go into computers, and final products such as cell phones and automobiles.

**Services** are activities that provide some combination of time, location, form, or psychological value.

**Operations management** is the management of processes or systems that create goods and/or provide services. It encompasses forecasting, capacity planning, scheduling, managing inventories, assuring quality, motivating employees, deciding where to locate facilities, buying material and equipment and maintaining them, and more.

We can use an airline company to illustrate an **operations system**. The system includes staff and airplanes, airport facilities, and maintenance facilities, sometimes spread out over a wide territory. Most of the activities performed by management and employees fall into the realm of operations management:

**Forecasting** such things as seat demand for flights, the growth in air travel, and weather and landing conditions.

**Capacity planning**, deciding the number of planes and where to use them.

**Scheduling** of planes for flights and for routine maintenance; scheduling of pilots and flight attendants; and scheduling of ground crews, counter staff, and baggage handlers.

**Managing inventories** of such items as food and beverages and spare parts.

**Assuring quality**, essential in flying and maintenance operations, where the emphasis is on safety. Also important in dealing with customers at ticket counters, check-in, telephone and electronic reservations, and in-flight service, where the emphasis is on efficiency and courtesy.

**Employee motivation and training** in all phases of operations.

**Location of facilities** according to top managers' decisions on which cities to provide service for, where to locate maintenance facilities, and where to locate major and minor hubs.

**Buying materials** such as fuel, food, bags, and spare parts. Buying aircraft and maintaining it.

The ideal situation for a business organization is to achieve a match of supply and demand. Having excess supply or excess capacity is wasteful and costly; having too little means lost opportunity and possible customer dissatisfaction. The key functions on the supply side are operations and supply chains, and sales and marketing on the demand side.

### Organizational functions

While the operations function is responsible for producing products and/or delivering services, it needs the support and input from other areas of the organization. Business organizations have three basic functional areas, as depicted in Figure 1.1 :

- finance
- marketing.
- operations.

[an impact assessment of distributed generation in distribution](#) - Feb 23 2023

web nov 16 2022 distributed generation dg is rising as an alternative to overcome the energy requirement of end users moreover green energy generation and pollutant reduction are also possible with the utilization of renewable energy sources as a dg despite the presence of the intermittent nature of energy production 1

*impact of distributed generation on power distribution systems* - Oct 02 2023

web jan 1 2012 the objective of this paper is to simulate the distribution test feeder and study the impacts that dg produces on real and reactive power losses voltage profile phase imbalance and fault level of distribution system by varying the penetration ratio and as well changing the placement of dgs at various nodes 2

**effects of dispersed generation dg on distribution systems** - Jan 13 2022

web jul 12 2005 abstract the most common design of distribution systems is the radial single source with no loops configuration this paper discusses some of the impacts caused by the interconnection of

[impact of distributed generation on distribution contingency analysis](#) - Apr 15 2022

web sep 1 2008 this research work focuses on the impacts of the dg after the reconfiguration of the system after a fault it gives the analysis of the impact of the dg location and size on the state of the system after a contingency with a change in the system topology and the loading conditions

**impact of distributed generation on distribution networks iee** - Feb 11 2022

web may 30 2008 publisher iee as a consequence of the growing importance of distributed generation dg it s very important to study the distribution network behavior in this paper voltage profile and gradient are analyzed taking in

**impacts of distributed generations on power system** - Oct 10 2021

web impacts of distributed generations on power system transmission distribution power quality and power stability 10 4018 978 1 7998 1230 2 ch010 with increasing population and urbanization the demand of electricity also increases day by day to fulfill this demand clean and environment friendly

[impact of distributed generation on distribution system under](#) - May 29 2023

web sep 19 2020 the distribution system ds network performance is influenced in several ways by dg dg is connected with the renewable energy sources to create a less environmental effect on power generation which provides enormous scope for

installation of more number of dg in a system in the future

impacts of distributed generation on distribution system based - Oct 22 2022
