Darwin's Finch Beak Activity

Objective/Skills: You are going to mimic how the variations in the beaks in Darwin's finches can shape their populations. The pasta, beans, and paper clips in this simulation will represent seeds for the finches. These seeds are an important food source and are necessary for survival. The different tools (fork, knife, and spoon) represent different alleles that impact the shape of the finch's beak. You will observe different levels of fitness throughout the trials in this lab. Natural selection (survival of the fittest) leads to evolution, or change in the gene pool, of a population.

Beak Shape Genetics: The shape of the finch's beak is determined by the alleles that it inherited from its parents. In this simulation, the dominant allele produces a fork-shaped beak. The recessive allele produces a knife-shaped beak. This gene for finches is incompletely dominant and finches that are heterozygous have a spoon-shaped beak.

1. Use the letter "A" to represent the three possible genotypes and identify what phenotype is produced from each genotype.

AA - Fork
Aa - Spoon
aa - Knife

2. Predict which beak shape will provide the greatest fitness for each "seed" type.

I predict that the spoon beak shape will be the most fit for eating pasta.

I predict that the fork beak shape will be the most fit for eating paper clips.

I predict that the spoon beak shape will be the most fit for eating beans.

Materials: Should be a bulleted list. Include numbers, sizes, etc.

Forks	Knives	Spoons	50 pieces of pasta	50 paper clips	50 beans	paper cups
-------	--------	--------	--------------------	----------------	----------	------------

Procedure:

1. There will be different groups containing 3 students. Each group member will be assigned a different "beak adaptation" or shape and must keep their "beak" for the entire lab. (No switching between trials!!!)
2. You will have 1 minute to do each trial, there will be three trials (1 for each of the "seeds": pasta, paper clips, beans).
3. Start trial #1 with 1 paper cup of 50 seeds. Carefully scatter the "seeds" all over the table. Do NOT let any fall on the floor. You and your lab partners will have 1 minute to "eat" as many "seeds" as you can with your "beaks" by placing them in your own collection cups. You can only use ONE hand.
4. At the end of 1 minute, record the number of "seeds" you ate (these should be in your own cups) and put your data into your chart for that trial. Copy the number of "seeds" your lab partners ate with their "beaks" on the chart for that trial.
5. Return the "seeds" to the original cups and then repeat steps 4-6 for all 3 trials. Record all data in the data table.
6. Analyze your data by comparing how fit for the environment each "beak" was, compared to the other "beaks" in your lab group.
