

## Installing the Exciter

- Excite that the power supply and network are turned off to prevent electrical shock or damage to equipment.
- Touch your hand to ground to discharge any electrostatic charge before handling the Factor.

The steps below correspond to the numbers in Figure 1.

1 Excite and record the FanWorks Identification number onto the facility floor plan, indicating the Factor's position and network wiring path. Use the rear-view marker on the Factor's Name ID label.

2 Install the supplied floor connector or PFD sensor according to the manufacturer's instructions and connect it to the terminal, as shown in the wiring diagrams. Connect the FanWorks Network DN, Network IN/1, and Power Supply to the terminal blocks, as shown in the wiring diagrams. If the Factor is at the end of the network, then terminate the network segment with Term A (100-Ω terminator). Refer to Detail A, and locate the terminal near the connection on the Factor.

**Note:** If installing loopback or accessory devices, or if using a master/slave configuration, proceed to the relevant section on the opposite page, and then return to steps 3 and 4.

3 Excite that the upper I/O of the Factor will be visible. Refer to the facility floor plan to locate, and using the Factor's Marker or compass mark the location of the first mounting hole. Drill the hole.

4 Mount the Factor.

### L-bracket installation

- Drill to the first mounting hole: 1 hollow wall section.
- Attach the Factor to the L-bracket, using 4 No. 10 screws and machine screws, 4 washers and flat washers.
- Attach the assembled Factor and L-bracket to the previously installed hollow wall section, using 4 No. 10 wood screws, 1 in. long.

### Surface sensor installation

- Drill to the first mounting hole: 1 hollow wall section.
- Insert into the wall section, leaving 1/8 in. (3.175 mm) out of the shell exposed. 4 No. 10 wood screws, 1 in. long.
- If using surface wire conduit, attach the first supplied Suspensor (Term B in Figure 1) to the underside of the Factor.
- Align the Factor with the mounting screws, and while lightly pressing, slide until it is securely in place. Insert the supplied cover cap.

Installation is complete. Proceed to Final Steps below.

## Installing Loopback

A single loopback may be connected to an Excite to enable an alarm to be triggered on the alarm. The loopback also releases the Factor's relay, for example, to discharge a magnetic door lock. Only use the Wiegand-enabled ETP-10000 loopback, which offers individual passwords for each user.

Refer to the Wiegand Installation Manual and the manufacturer's instructions. Loopback may be connected to either master or slave Factor.

**Note:** The loopback requires a separate 12 VDC power supply.

## Installing Accessory Devices

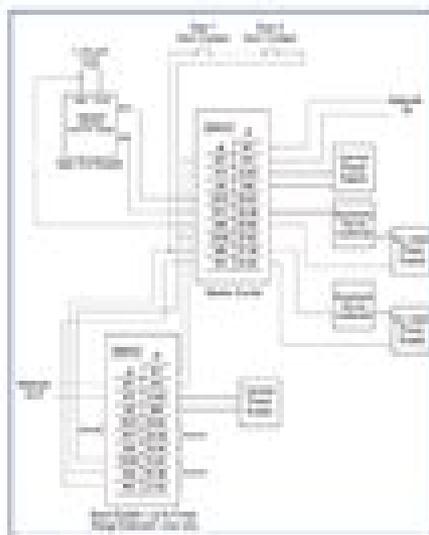

Each Factor has two 5V-MDC, 1-Amp, 10V or 16V relays for controlling accessory devices, such as magnetic door locks and high voltage doors.

Refer to the Wiegand Installation Manual and the manufacturer's instructions for installation procedures. Devices may be connected to either master or slave Factor; connect devices to the master Factor's relay first, then connect additional devices to the slave Factor, starting with the alarm.

**Note:** Accessory devices require their own power supply.

## Master/Slave Installations

Master and slave Factors are installed and connected to the FanWorks network in the same way as other Factors, with the following additions:

At least one termination group or resistor is also needed. Refer to the ETP-10000 manual for details on how to connect a termination group to the network.

For slave Factors using their own I/O modules, the following is also required, as shown in Figure 1:

- The relay lock for alarm holds requires an external alarm to both the master and the slave to ensure that all doors in the vicinity will lock when a signal is present.
- Door contacts are wired together in series so the door contact input on both the master and the slave. The result is that when any door in a master/slave configuration is open, the system behaves as if all doors are open or that will occur if a signal is a door in the vicinity of a door that is open.

## Final Steps

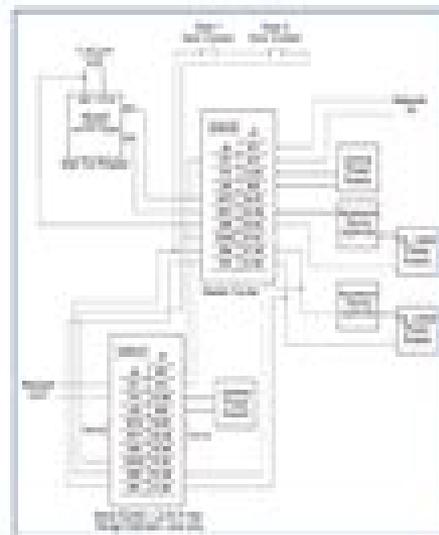

Do not supply power to the Factor or any other network device until all connections are complete.

Once all devices are installed, power up the Factor and other devices in the Wiegand system software, run Auto Configure to install the new devices, and then configure them for operation.

The coverage area of each Factor must also be checked.

Refer to the Wiegand Installation Manual (p/n 4000001) for detailed information on how to complete these steps.

Automated Data Systems Manual, Standard Installation/Division Personnel System - United States Army Reserve: attachment 4. Data reference guide, 1985      Exploring Graphs with Elixir Tony Hammond, 2022-11-02

Data is everywhere it s just not very well connected which makes it super hard to relate dataset to dataset Using graphs as the underlying glue you can readily join data together and create navigation paths across diverse sets of data Add Elixir with its awesome power of concurrency and you ll soon be mastering data networks Learn how different graph models can be accessed and used from within Elixir and how you can build a robust semantics overlay on top of graph data structures We ll start from the basics and examine the main graph paradigms Get ready to embrace the world of connected data Graphs provide an intuitive and highly flexible means for organizing and querying huge amounts of loosely coupled data items These data networks or graphs in math speak are typically stored and queried using graph databases Elixir with its noted support for fault tolerance and

concurrency stands out as a language eminently suited to processing sparsely connected and distributed datasets Using Elixir and graph aware packages in the Elixir ecosystem you ll easily be able to fit your data to graphs and networks and gain new information insights Build a testbed app for comparing native graph data with external graph databases Develop a set of applications under a single umbrella app to drill down into graph structures Build graph models in Elixir and query graph databases of various stripes using Cypher and Gremlin with property graphs and SPARQL with RDF graphs Transform data from one graph modeling regime to another Understand why property graphs are especially good at graph traversal problems while RDF graphs shine at integrating different semantic models and can scale up to web proportions Harness the outstanding power of concurrent processing in Elixir to work with distributed graph datasets and manage data at scale What You Need To follow along with the book you should have Elixir 1.10 installed The book will guide you through setting up an umbrella application for a graph testbed using a variety of graph databases for which Java SDK 8 is generally required Instructions for installing the graph databases are given in an appendix
