Multimedia Networks Hans W. Barz, Gregory A. Bassett, 2016-03-21 The transportation of multimedia over the network requires timely and errorless transmission much more strictly than other data. This has led to special protocols and to special treatment in multimedia applications: telephony, IP TV, streaming, to overcome network issues. This book begins with an overview of the vast market combined with the user's expectations. The basic mechanisms of the audio video coding H.26x etc. are explained to understand characteristics of the generated network traffic. Further chapters treat common specialized underlying IP network functions which cope with multimedia data in conjunction with special time adaptation measures. Based on those standard functions these chapters can treat uniformly SIP, H.248, High End IP TV, Webcast, Signage etc. A special section is devoted to home networks which challenge high end service delivery due to possibly unreliable management. The whole book treats concepts described in accessible IP based standards and which are implemented broadly. The book is aimed at graduate students, practitioners with good basic knowledge in computer networking. It provides the reader with all concepts of currently used IP technologies of how to deliver multimedia efficiently to the end user. **SIP: Understanding the Session Initiation Protocol, Fourth Edition** Alan B. This cutting edge book shows how SIP provides a highly scalable and cost effective way to offer new and exciting telecommunication feature sets helping practitioners design next generation network and develop new applications and software stacks. Other key discussions include SIP as a key component in the Internet multimedia conferencing architecture, request and response messages, devices in a typical network, types of servers, SIP headers, comparisons with existing signaling protocols including H.323 related protocols, SDP (Session Description Protocol) and RTP (Real time Transport Protocol) and the future direction of SIP. **IMS** Mark Wuthnow, Jerry Shih, Matthew Stafford, 2009-07-28 IP Multimedia Subsystem (IMS) technology which merges the Internet with interactive telecommunications represents the here and now for today's packet switched networks. Consequently anyone working with or around these converging fields needs to possess a fundamental understanding of IMS and how this technology is poised to change the way new apps... **SIP** Alan B.
