### States of Matter Simulation Lab

Before you open the simulation:

#### PREDICT

1. Draw a diagram below showing what you think the molecules will look like for each state of matter: solid, liquid, and gas. Write a sentence below each diagram predicting what the motion of the molecules will be like.

	Solid	Liquid	Gas
Diagram of molecules			
Sentence explaining how molecules will be moving	The molecules are organized and do not move around.	The molecules slowly begin moving because they are less organized. However, they will stay within the container they are held in.	The molecules are fast moving and will move within the container as well as outside the container.

2. If you start with a substance as a solid, what will happen to the molecules as you add thermal energy (heat)?

If the molecules are heated as that means they will begin moving faster and faster due to becoming less organized.

**ONCE YOU HAVE COMPLETED THIS PAGE YOU MAY BEGIN THE SIMULATION.**

Open the simulation. You will find it in a folder on your desktop labeled "States of Matter Simulation."

#### INVESTIGATE

1. Use the menu on the right side of the program to select Water and Solid. Draw and describe what you see in the space below.

Diagram	Description
	The molecules are barely moving and clumped together.

4. Now, use the slider on the bottom of the program to Add Heat. Notice the thermometer at the top of the program. What temperature scale is this thermometer showing? Fahrenheit.

5. What happens to the water as you increase the temperature? That turns faster and faster.

6. What is the melting/freezing point of water in Fahrenheit? 32 F.

7. Add heat until the temperature is just below and then just above the melting point of water. How is water different below its melting point and above it? That moves faster.

8. Draw and describe what water looks like as a liquid.

Diagram	Description
	The molecules aren't really moving in an organized group.
