

## CHM 130LL: Lab Safety

Name:     Answer Key    

Section:                     

### Introduction:

Safety in the chemistry laboratory is the primary concern of all scientists. Everyone who works in a chemistry lab is responsible for keeping the lab safe. To ensure that your experience is a safe one, this lab is designed to teach you the proper techniques for handling chemicals and the use and location of safety equipment within the laboratory classroom. The last page of this lab is an agreement between you, your fellow students, the instructor, and the college that you have been taught, understand, and agree to abide by all safety rules set forth in this lab exercise. You will sign one copy of the safety agreement and hand it in to your instructor, the second copy is for you to keep as a reference.

### Part I: Lab Equipment *(all locations are for NS314, if you are in a different room, locations will be different)*

Several items within the lab classroom are designed to handle emergency situations. Each item is listed below. Read the description of each item, and note their locations within the classroom.

**Exits:** Knowing how and where to leave the laboratory in an emergency is very important. There are two exits located within the laboratory classroom. In an emergency, WALK quickly to the closest, unblocked exit, leave the classroom and exit the building.

Location of the exits in the lab classroom:

*Two doors to hallway on south wall, two doors to balance room and next classroom on west wall*

**Safety Shower:** The safety shower is used in the event of a chemical spill to wash your body and clothing. It can also be used to put out some fires. Ideally, the person affected should remove their clothing, with help if necessary. This ensures that all of the chemicals are washed off of the body.

Location of the Safety Shower:

*Safety Shower is located in the north-east corner of the room near the hallway door*

**Eye Wash Station:** An eyewash is specifically designed to direct a stream of water directly into your eyes in the event of a chemical spill or splash to your face. Usually, the person affected will need help to hold their eyes open so the water can rinse away all of the chemical. The affected person should stay at the eyewash for at least 5 full minutes to ensure the chemicals are washed out. Strict use of goggles can help to prevent eye injury and minimize the need to use the eyewash station.

Location of the Eyewash Station(s):

*Eyewash is located in the north-east corner of the room near the hallway door – next to safety shower*

**Fume Hoods:** Fume Hoods are designed to prevent harmful fumes from spreading or to prevent smoke from building up in the lab classroom. In many cases, a chemical reaction may produce fumes that can be irritating to the eyes and lungs, or even fatal if breathed in. The fume hood is designed to pull the fumes up and out of the lab and evacuate them safely from the building. The glass door on the fume hood can also be used to contain violent reactions and prevent chemical splashes or spills. Your instructor will notify you if the fume hood will be needed during a particular lab exercise.

Location of the Fume Hoods and the operating switches:

*There are three fumes hoods: large hood on north wall, large hood and small hood (for waste) on west wall*
