

Probability

Expressions of probability

Probability deals with the theory of chance, and is a measure of the chance or likelihood that something will happen.

Let us illustrate this by the following example:

Problem: A spinner has four equal sectors coloured yellow, blue, red and green. What is the probability of landing on blue after spinning the spinner once?

Solution: The chances of landing on blue are 1 in 4, or one fourth. Therefore, the probability of landing on blue is one fourth, which we can also write as $\frac{1}{4}$, 0.25 or 25%.

Here are some definitions and examples from the problem above.

Definition	Example
An experiment is a situation involving chance or probability that leads to results called outcomes.	In the problem above, the experiment is spinning the spinner. Other examples are: flipping a coin, or rolling a dice.
An outcome is the result of a single trial of an experiment, such as spinning the spinner once.	The possible outcomes are landing on yellow, blue, green or red. In the problem above, we were interested in the "landing on blue" outcome.
An event is one or more outcomes of an experiment.	One event of this experiment is landing on blue.
Probability is the measure of how likely an event is.	The probability of landing on blue is one fourth (that is, $\frac{1}{4}$, 0.25 or 25%).

Theory of Probability Boris V. Gnedenko,1998-05-13 This book is the sixth edition of a classic text that was first published in 1950 in the former Soviet Union The clear presentation of the subject and extensive applications supported with real data helped establish the book as a standard for the field To date it has been published into more than ten languages and has gone through five editions The sixth edition is a major revision over the fifth It contains new material and results on the Local Limit Theorem the Integral Law of Large Numbers and Characteristic Functions The new edition retains the feature of

developing the subject from intuitive concepts and demonstrating techniques and theory through large numbers of examples The author has for the first time included a brief history of probability and its development Exercise problems and examples have been revised and new ones added

Selected Works of A. N. Kolmogorov A.N. Shirayev, 1992-02-29 The creative work of Andrei N Kolmogorov is exceptionally wide ranging In his studies on trigonometric and orthogonal series the theory of measure and integral mathematical logic approximation theory geometry topology functional analysis classical mechanics ergodic theory superposition of functions and in formation theory he solved many conceptual and fundamental problems and posed new questions which gave rise to a great deal of further research Kolmogorov is one of the founders of the Soviet school of probability theory mathematical statistics and the theory of turbulence In these areas he obtained a number of central results with many applications to mechanics geophysics linguistics and biology among other subjects This edition includes

Kolmogorov's most important papers on mathematics and the natural sciences. It does not include his philosophical and pedagogical studies, his articles written for the *Bolshaya Sovetskaya Entsiklopediya*, his papers on prosody and applications of mathematics, or his publications on general questions. The material of this edition was selected and compiled by Kolmogorov himself. The first volume consists of papers on mathematics and also on turbulence and classical mechanics. The second volume is devoted to probability theory and mathematical statistics. The focus of the third volume is on information theory and the theory of algorithms.
