

Unit 7: Worksheet 2

1. Calculate the gravitational field strength on the moon, which has a radius of 1.74×10^6 m, and a mass of 7.36×10^{22} kg.

2. How much would a 1500 kg satellite weigh at the surface of the moon? Do it two ways.

Assume that the diagram below represents the orbit of the satellite around the moon at an altitude of 100 km. (make sure to use SI Units!)

3. Construct a force diagram of the satellite in orbit.

4. Demonstrate the direction of the acceleration, if any, by means of a motion map.

5. What is the radius of the orbit of the satellite? (radius of moon + altitude of orbit)

Teaching and Researching: Reading William Peter Grabe, Fredricka L. Stoller, 2013-11-26 Teaching and Researching Reading was first written to help language professionals understand the complex nature of reading Now in a thoroughly updated and improved second edition the book expands connections from research on reading to instructional practices and teacher initiated action research Offering an updated overview of reading theory it summarises key ideas and issues in first and second language contexts In addition to providing insightful research analyses Grabe and Stoller offer practical advice for practitioners and researchers including evidence based teaching ideas and a multi step iterative process for conducting meaningful action research on reading related topics The volume outlines 29 projects for teacher adaptation and use as well as numerous new or substantially expanded resource materials that can be used for both action research and classroom instruction Learning aids featured throughout the volume include key concept boxes and a glossary of key terms quote boxes highlighting critical issues in the field resource lists of relevant journals books and websites Fully revised throughout with a range of new exemplary L1 and L2 research studies and an entirely new chapter on the move from research implications to instructional applications this second edition of Teaching and Researching Listening is an invaluable resource for teacher trainers practicing teachers materials writers and researchers alike

Investigating Complex Phenomena: Bridging between Systems Thinking and Modeling in Science Education Tom Bielik, Moritz Krell, Laura Zangori, Orit Ben Zvi Assaraf, 2023-11-15 Understanding the complexity of the natural world and making sense of phenomena is one of the main goals of science and science education When investigating complex phenomena such as climate change or pandemic outbreaks students are expected to engage in systems thinking by considering the boundaries of the investigated system identifying the relevant components and their interactions and exploring system attributes such as hierarchical organization dynamicity feedback loops and emergence Scientific models are tools that support students reasoning and understanding of complex systems and students are expected to develop their modeling competence and to engage in the modeling process by constructing testing revising and using models to explain and predict phenomena Computational modeling tools for example provide students with the opportunity to explore big data run simulations and investigate complex systems Therefore both systems thinking and modeling approaches are important for science education when investigating complex phenomena
