

## Safety Warning Instructions: CSA Certified Line Pressure Regulators (natural gas & LP piping systems up to 2 psi)

### NOTICE

LINE PRESSURE REGULATORS DO NOT TURN OFF GAS FLOW.

### A WARNING

Read these instructions carefully and completely before installing or operating. Failure to follow these could result in a fire or explosion causing property damage, personal injury, or loss of life.

Service and installation must be performed by a trained/experienced service technician.

The Maxitrol regulator should not be operated until the regulator/installation is inspected and approved by the local code authority.

### To minimize the possibility of FIRE, EXPLOSION, and OTHER HAZARDS:

All products used with combustible gas must be installed and used strictly in accordance with the instructions of the manufacturer, and in accordance with local codes or, in the absence of local codes, in accordance with the National Fuel Gas Code (NFPA 54), or the Natural Gas and Propane Install code, CAN/CGA-B 149.1, as applicable.

Do NOT use a product if you suspect it has been subjected to high temperatures, damaged, tampered with, or taken apart. Do not use a product if you suspect it has been under water or that water has seeped into the product. Any of these incidents can cause leakage or other damage that may affect proper operation and cause potentially dangerous combustion problems.

Do NOT store or use gasoline or other flammable vapors or liquids in the vicinity of this control or other appliances.

- Maxitrol regulators are suitable for natural, manufactured, mixed gases, liquefied petroleum gases, and LP gas-air mixtures.
  - Install the regulator properly (mounting acceptable mounting position in table below) with gas flowing as indicated by the arrow on the casing.
  - Use approved thread joint compound. Be careful excess thread joint compound does not collect in or on the regulator inlet, outlet, or fittings, which could cause poor performance and interfere with lockup. During the installation, use correctly threaded pipes, and carefully follow all assembly procedures. Ensure there is no cross threading. Cross threading can result in damage and/or leakage. If the threads have been damaged or cross threaded, the regulator must be replaced.

### A WARNING

Apply wrench or vice pressure only to the flat areas of the regulator at the end being threaded to the pipe. Pressure to any other area can cause leakage/damage that can affect proper operation and cause potentially dangerous combustion problems.

Apply wrench or vice pressure to the shaded areas only.

- Make sure markings or wording on regulator are not painted over or destroyed.
- Lockup Regulators: To allow the regulator to assume its normal lockup pressure, it is important to have a gradual increase in supply pressure. When initially introducing or restoring the gas supply to the Maxitrol line pressure regulator, open the manual valve very slowly in the line supplying the Maxitrol line pressure regulator.
- Check carefully for gas leaks immediately after the regulator has been installed and the gas turned on (see 2 above). Do this before attempting to operate any appliances or other gas burning devices being supplied by the line regulator. Use a non-corrosive leak detection fluid, or other approved leak detection method, around the diaphragm flanges, vent opening, seal cap, pipe connections, and all other joints. Wipe clean with a damp rag. It is a good practice to periodically check for leakage during use of the appliance.
- Venting must be controlled in accordance with all applicable codes and regulations. Avoid the danger of escaping gas should there be vent pipe leakage. Vent pipes must be open and the open end protected against

### A WARNING

Do NOT use if leakage is detected. There is a danger of fire or explosion depending on conditions.

### A WARNING

Never connect a Maxitrol regulator directly to the propane supply source. LP applications require an external regulator (not supplied). Install the external regulator between the propane supply source and Maxitrol regulator.

### A WARNING

Very high pressure surges in the gas supply line (or as a result of exposing the system to high pressure) may result in serious internal damage and cause leakage or affect regulator operation. If you suspect that a Maxitrol regulator has been exposed to more than twice the maximum operating inlet pressure, as shown in the table below, turn off the gas and have the system checked by an expert.

### NOTICE

If you suspect the pressure downstream of the Maxitrol line pressure regulator has exceeded 2 psi, check the downstream control manufacturer's bulletin(s) for maximum allowable pressure in case repair or replacement of downstream control may be required.

entry of foreign matter, including water. Venting systems are to be piped gas tight using approved thread joint compound. Be careful excess thread joint compound does not collect in or on the regulator vent, which could cause poor performance and interfere with lockup. For more information on venting codes visit [www.maxitrol.com/venting.pdf](http://www.maxitrol.com/venting.pdf).

- When installed outdoors, the use of a certified Maxitrol Vent Protector™ is recommended, and installation should be in a horizontal upright position (horizontal flow position A, see Figure 1). Regional flood lines and snow depth should be considered when choosing an installation location. Refer to local codes and requirements.
- Use approved thread joint compound. Be careful excess thread joint compound does not collect in or on internal regulator surfaces.
- The outlet pressure of the regulator must be measured to make sure it is in accordance with intended usage.
- Caution should be used to guarantee that there is sufficient inlet pressure to achieve the desired outlet pressure. No readjustment of the outlet pressure setting should be made unless the inlet pressure is within the proper limits for the regulator. Failure to follow this may result in overfiring of the appliance or other gas burning device. The Maxitrol Bulletin for the regulator should be consulted for specific inlet and outlet pressure relationships.
- The outlet pressure can be adjusted within the spring range as indicated on the label of the regulator. The outlet pressure is changed by moving the adjustment screw located under the seal cap. Rotating the adjustment screw clockwise will increase the pressure, counterclockwise will decrease pressure.
- The seal cap and seal cap gasket must be securely in place after adjustment.
- Refer to the table below for the following:
  - A Maxitrol regulator must be used within the ambient temperature range. Maximum inlet pressure must not exceed CSA rated inlet pressure. Install the regulator in an appropriate mounting position only.
  - For Technical Support contact a Maxitrol Technical Support Representative, Maxitrol Company, Southfield, MI USA. Phone: (248) 368-1400.

\*\* To ensure fast response of the regulator when equipped with a ball-check type automatic vent locking device (12A09, 12A39, 12A49), regulators must be in upright position (A) with non-integral vent liner installed directly into vent (B/C/D). Any other mounting position may interfere with lockup or cause pilot outage, where applicable.

\*\* Maxitrol Vent Protector models are: 12A15 (1/8" NPT), 12A15-B (3/8" NPT), and 12A25 (1/2" NPT).
