## Section 1: Genes are a Big Part of Genetics!

Cattle include female cows, and male steers. Cattle have 60 chromosomes in their cells. A steer's sperm contains 30 chromosomes, and a cow's egg contains 30 chromosomes. When the sperm meets the egg, a **zygote** is formed. The zygote then divides many times, and develops into a cow or steer.

Chromosome  
From Mother Cow

Chromosome  
From Father Steer

Two of the calf's chromosomes are shown above. It is a **homologous pair** because each chromosome contains **alleles** (versions of a gene) that code for the same traits. One of the chromosomes in the pair come from the mother and one come from the father.

The only difference between the two is that one may have a **dominant allele** (capital letter) and the other a **recessive allele** (lower case) for a given trait. To have a dominant trait the calf only needs to have one copy of the dominant allele. However, to have a recessive trait, they calf must have both copies of the recessive allele.

Use the chromosomes above, the chart below, and your vocabulary list to answer the following questions.

| TRAIT                   | DOMINANT              | RECESSIVE                     |
|-------------------------|-----------------------|-------------------------------|
| Horns                   | Stubby = H            | Long = h                      |
| Body Hair Color Pattern | Solid Color = B       | Spotted = b                   |
| Tail Color Pattern      | Solid = T             | Striped = t                   |
| Hoof Shape              | Claw (split in 2) = A | Single Foot (single hoof) = a |

**Introduction to Genetic Algorithms** S.N. Sivanandam, S. N. Deepa, 2007-10-24

The origin of evolutionary algorithms was an attempt to mimic some of the processes taking place in natural evolution. Although the details of biological evolution are not completely understood even nowadays, there exist some points supported by strong experimental evidence. Evolution is a process operating over chromosomes rather than over organisms. The former are organic tools encoding the structure of a living being, i.e., a creature is built decoding a set of chromosomes. Natural selection is the mechanism that relates chromosomes with the efficiency of the entity they represent, thus allowing that efficient organism which is well adapted to the environment to reproduce more often than those which are not. The evolutionary process takes place during the reproduction stage. There exists a large number of reproductive mechanisms in Nature. Most common ones are mutation that causes the chromosomes of offspring to be different to those of the parents and recombination that combines the chromosomes of the parents to produce the offspring. Based upon the features above, the three mentioned models of evolutionary computing were independently and almost simultaneously developed.

**Genetic Algorithms and Engineering Optimization** Mitsuo Gen, Runwei Cheng, 1999-12-28. A comprehensive guide to a powerful new analytical tool by two of its foremost innovators. The past decade has witnessed many exciting advances in the use of genetic algorithms (GAs) to solve optimization problems in everything from product design to scheduling and client-server networking. Aided by GAs, analysts and designers now routinely evolve solutions to complex combinatorial and multiobjective optimization problems with an ease and rapidity unthinkable with conventional methods. Despite the continued growth and refinement of this powerful analytical tool, there continues to be a lack of up-to-date guides to contemporary GA optimization principles and practices. Written by two of the world's leading experts in the field, this book fills that gap in the literature. Taking an intuitive approach, Mitsuo Gen and Runwei Cheng employ numerous illustrations and real-world examples to help readers gain a thorough understanding of basic GA concepts including encoding, adaptation, and genetic optimizations and to show how GAs can be used to solve an array of constrained combinatorial, multiobjective, and fuzzy optimization problems. Focusing on problems commonly encountered in industry, especially in manufacturing, Professors Gen and Cheng provide in-depth coverage of advanced GA techniques for Reliability design, Manufacturing cell design, Scheduling, Advanced transportation problems, Network design, and routing. Genetic Algorithms and Engineering Optimization is an indispensable working resource for industrial engineers and designers as well as systems analysts, operations researchers, and management scientists working in manufacturing and related industries. It also makes an excellent primary or supplementary text for advanced courses in industrial engineering, management science, operations research, computer science, and artificial intelligence.

**A Contemporary Autobiography of a Science Educator** Scott D. Robinson, 2008-01-01 A Contemporary Autobiography of a Science Educator reminds readers that they teach who they are and understanding who they are is fundamental for meaningful communication and effective classroom instruction The book is for science educators teacher educators and others who wish to examine their own personal and professional identities in the social and cultural contexts in which their lives are embedded Just as teaching can be viewed as relationship with others this contemporary autobiography is situated on the significance of relationship with self As a contemporary autobiography the narrative reveals the author s subjective truths while digging deeply into psychosocial motives of power and intimacy The author reflects on his personal choices and career decisions that led him into and out of high school science teaching The book contains stories and reflections from summer work camp experiences undergraduate college days teacher preparation episodes and high school science teaching Story themes are diversity and leadership group identity and motivation urban teaching and teacher preparation and high school science teaching These themes evolve out of nuclear episodes of the author s storied life that brings present day understanding and meaning from past actions and

interactions This kind of critical introspection may hold special relevance for teachers teacher educators and others who wish to make their own identities salient and relevant to their own needs and interests as well as the needs and interests of students teacher candidates and clients whom they serve

*Encyclopedia of Optimization* Christodoulos A. Floudas, Panos M. Pardalos, 2008-09-04 The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research the richness of ideas and the breadth of applications that has come from this field The second edition builds on the success of the former edition with more than 150 completely new entries designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced Particularly heavy attention resulted in health science and transportation with entries such as Algorithms for Genomics Optimization and Radiotherapy Treatment Design and Crew Scheduling
