    * Mount the SmartStart module as high as possible in the vehicle (side with color label and model number facing down). Mount with minimal obstructions that can affect communications and within reach of the main Directed system using the provided cables (do not extend).
    * DO NOT connect the SmartStart module until the final programming of the Remote Start main unit and verification of security/remote start system operations are completed.

Wiring Schematic

NOTE: The appearance and connector/port arrangement on the Directed/Avital/Xpresskit system may differ to the examples shown.

Signal Strength (RSSI)

The module's signal strength (RSSI) can be viewed in the activation portal after a successful transmission test. This field is displayed on the webpage as "RSSI: XX dB" with XX being the numeric variable. Use the range guide (at right) to determine the signal strength. Monitor this signal during installation to ensure the device is mounted in a location which maximizes signal strength with minimal interference.

GPS location accuracy should also be checked on the activation portal when activating DSM/VSM250 modules.

-50 to -90 dB	= good signal strength
-91 to -100 dB	= borderline/inconsistent signal strength
> -100 dB	= weak, insufficient signal strength
