OUTBOARD MOTOR

Start engine and allow to warm to normal operating temperature. While idling, remove timing marks (Fig. 19-22) with timing light, then disconnect spark wires, advance timing of distributor (rotate clockwise) to advance 10° (Fig. 19-23) to adjust timing.

IGNITION-SMOKING. The only appropriate action when seeing ignition system to prevent damage to ignition components. The fuel system should be checked to make certain that faulty operation is not the result of (poor) fuel mixture, contaminated fuel or other fuel system malfunctions.

The maximum recommended fuel loading system is an 800-watt 15-Minute Motorboat 15-0210 or a variable regulator 150-watt capable of handling peak voltage up to 400 volts, and 15-Minute Spark Tester 1-0220-1 or equivalent spark tester.

Begin trouble-shooting process by making sure all connections are ground and clean and tight. Connect spark tester to spark plug leads, adjust tester spark gap to $\frac{1}{8}$ inch (3 mm) and ground cover to engine. Note that engine running speed must be maximum of 400 rpm for accurate test results. Check engine while testing spark gap. If irregular spark is noted on all cylinders, proceed as follows: Start engine and allow to warm to normal operating temperature. Load to maximum load (maximum check rpm at spark plug lead of each cylinder) while varying engine speed between idle and full throttle. Remove 120 volt lead connected to any cylinder that shows different spark than other cylinders.

If no spark is noted at one or more cylinders, remove ignition points by removing black yellow lead from terminal black (A-Fig. 19-14). Make sure black yellow lead is not shorted to ground. Check engine and advance spark. If normal spark is now noted at all cylinders, repair fuel wiring as necessary. If no spark is noted at one or more cylinders, remove 120 volt lead from points lead and remove black yellow leads from terminal black (C) (except bottom lead). Make sure black yellow leads are not grounded or contacting each other. If normal spark is now noted at all cylinders, repair fuel wiring as necessary.

If no spark is noted at one or more cylinders, and other steps:

NOTE: Water leaks are frequent. Use care when handling leads to prevent damage.

Remove cover from terminal block (B) and disconnect bottom blue spark lead (marked 1) and bottom yellow lead
