It begins with an in-depth exploration of the cardiovascular system, introducing the electrophysiology of the heart to help readers grasp how drugs influence cardiac rhythm and function. The section on congestive heart failure elaborates on the therapeutic strategies and pharmacological agents used to restore cardiac efficiency. Further, antihypertensive drugs are discussed in detail, focusing on their mechanisms, classifications, and clinical uses. The subsequent unit extends the discussion to anti-anginal, anti-arrhythmic, and anti-hyperlipidemic drugs, offering insights into the pharmacological management of coronary artery diseases and lipid disorders. Topics such as drugs used in shock therapy and hematinics emphasize their role in maintaining circulatory stability and correcting anemic conditions. The third section continues with agents affecting blood coagulation, including coagulants, anticoagulants, fibrinolytics, and antiplatelet drugs, followed by plasma volume expanders used in emergency medicine. The urinary system pharmacology chapter covers diuretics and antidiuretics, highlighting their role in fluid balance and renal function. Moving to autacoids, the book details the pharmacology of histamine, serotonin, 5-HT, prostaglandins, thromboxanes, leukotrienes, angiotensin, bradykinin, and substance P, describing their physiological and pathological significance. The next section covers NSAIDs, anti-gout, and antirheumatic drugs, vital in the management of inflammation and joint disorders. The endocrine pharmacology chapters present the mechanisms and clinical uses of pituitary, thyroid, parathyroid, pancreatic, and adrenal hormones, as well as oral hypoglycemics and glucagon. A continuation explores sex hormones, androgens, estrogens, and progesterone, along with oral contraceptives and uterine drugs. Finally, the bioassay section introduces its principles, applications, and types, explaining experimental methods for determining drug potency. Specific bioassays for insulin, oxytocin, vasopressin, ACTH, d-tubocurarine, digitalis, histamine, and serotonin are discussed, emphasizing the importance of biological testing in pharmacological research and standardization. **TEXT BOOK OF**
