Ageing of Infrastructure Frank Collins,Frédéric Blin,2018-09-21 The book addresses the problem of ageing infrastructure and how ageing can reduce the service life below expected levels The rate of ageing is affected by the type of construction material environmental exposure function of the infrastructure and loading each of these factors is considered in the assessment of ageing How do international design codes address ageing Predictive models of ageing behaviour are available and the different types empirical deterministic and probabilistic are discussed in a whole of life context Life cycle plans initiated at the design stage can ensure that the design life is met while optimising the management of the asset reducing life cycle costs and reducing the environmental footprint due to less maintenance remediation interventions and fewer unplanned stoppages and delays Health monitoring of infrastructure can be conducted via implanted probes wired or wireless or by non destructive testing that can routinely measure the durability loading and exposure environments at key locations around the facility Routine monitoring can trigger preventative maintenance that can extend the life of the infrastructure and minimise unplanned and reactive remediation while also providing ongoing data that can be utilised towards more durable future construction Future infrastructure will need to be safe and durable financially and environmentally sustainable over the lifecycle thereby raising socio economic wellbeing The book concludes by discussing the key impacting factors that will need to be addressed The author brings a strong academic and industry background to present a resource for academics and practitioners wishing to address the ageing of built infrastructure **Good Packaging** ,1987 **Microbial Ecology of**

Wastewater Treatment Plants Maulin P. Shah,Susana Rodriguez-Couto,2021-05-15 *Microbial Ecology of Wastewater Treatment Plants* presents different methods and techniques used in microbial ecology to study the interactions and evolution of microbial populations in WWTPs particularly the new molecular tools developed in the last decades These molecular biology based methods e g studies of DNA RNA and proteins provide a high resolution of information compared to traditional ways of studying microbial wastewater populations such as microscopic examination and culture based methods In addition this book addresses the ability of microorganisms to degrade environmental pollutants Describes application of different Omics tools in Wastewater treatment plants WWTPs Demonstrates the role of microorganisms in WWTPs Includes

discussions on the microbial ecology of WWTPs Covers the microbial diversity of activated sludge Emphasizes cutting edge molecular tools **Coupled Thermo-Hydro-Mechanical Processes in Fractured Rock Masses** Fengshou Zhang, Branko Damjanac, Jason Furtney, 2023-08-10 The subject of thermo hydro mechanical coupled processes in fractured rock masses has close relevance to energy related deep earth engineering activities such as enhanced geothermal systems geological disposal of radioactive waste sequestration of CO₂ long term disposal of waste water and recovery of hydrocarbons from unconventional reservoirs Despite great efforts by engineers and researchers comprehensive understanding of the thermo hydro mechanical coupled processes in fractured rock mass remains a great challenge The discrete element method DEM originally developed by Dr Peter Cundall has become widely used for the modeling of a rock mass including its deformation damage fracturing and stability DEM modeling of the coupled thermo hydro mechanical processes in fractured rock masses can provide some unique insights to say the least for better understanding of those complex issues The authors of this book have participated in various projects involving DEM modeling of coupled thermo hydro mechanical processes during treatment of a rock mass by fluid injection and or extraction and have provided consulting services to some of the largest oil and gas companies in the world The breadth and depth of our engineering expertise are reflected by its successful applications in the major unconventional plays in the world including Permian Marcellus Bakken Eagle Ford Horn River Chicotepec Sichuan Ordos and many more The unique combination of the state of the art numerical modeling techniques with state of the practice engineering applications makes the presented material relevant and valuable for engineering practice We believe that it is beneficial to share the advances on this subject and promote some further development
