**Introduction and Reference** Bill Ogden,IBM Redbooks,2013-06-24 This IBM Redbooks publication introduces the IBM System z Personal Development Tool zPDT which runs on an underlying Linux system based on an Intel processor zPDT provides a System z system on a PC capable of running current System z operating systems including emulation of selected System z I O devices and control units It is intended as a development demonstration and learning platform and is not designed as a production system This book providing an introduction is the first of three volumes The second volume describes the installation of zPDT including the underlying Linux and a particular z OS distribution and basic usage patterns

The third volume discusses more advanced topics that may not interest all zPDT users. The IBM order numbers for the three volumes are SG24 7721, SG24 7722, and SG24 7723. An additional volume, SG24 7859, describes the use of zPDT in a Parallel Sysplex configuration. The systems discussed in these volumes are complex with elements of Linux for the underlying PC machine, z Architecture for the core zPDT elements, System z I/O functions for emulated I/O devices, and z OS providing the System z application interface and possibly with other System z operating systems. We assume the reader is familiar with general concepts and terminology of System z hardware and software elements and with basic PC Linux characteristics.
