

In public accounting, an accountant may practice as an individual or as a member of a public accounting firm. Public accountants who have met a state's education, experience, and examination requirements may become **Certified Public Accountants (CPAs)**. CPAs generally perform general accounting, audit, or tax services. As can be seen in Exhibit 4, CPAs have slightly better starting salaries than private accountants. Career statistics indicate, however, that these salary differences tend to disappear over time.

The requirements for obtaining a CPA certificate differ among the various states. All states require a college education in accounting, and most states require 150 semester hours of college credit. In addition, a candidate must pass an examination prepared by the American Institute of Certified Public Accountants (AICPA). Because all functions within a business use accounting information, experience in private or public accounting provides a solid foundation for a career. Many positions in industry and in government agencies are held by individuals with accounting backgrounds.

Generally Accepted Accounting Principles

If a company's management could record and report financial data as it saw fit, comparisons among companies would be difficult, if not impossible. Thus, financial accountants follow **generally accepted accounting principles (GAAP)** in preparing reports. These reports allow investors and other stakeholders to compare one company to another.

To illustrate the importance of generally accepted accounting principles, assume that each sports conference in college football used different rules for counting touchdowns. For example, assume that the Pacific Athletic Conference (PAC 10) counted a touchdown as six points and the Atlantic Coast Conference (ACC) counted a touchdown as two points. It would be difficult to evaluate the teams under such different scoring systems. A standard set of rules and a standard scoring system help fans compare teams across conferences. Likewise, a standard set of generally accepted accounting principles allows for the comparison of financial performance and condition across companies.

Accounting principles and concepts develop from research, accepted accounting practices, and pronouncements of authoritative bodies. Currently, the **Financial Accounting Standards Board (FASB)** is the authoritative body having the primary responsibility for developing accounting principles. The FASB publishes *Statements of Financial Accounting Standards* as well as *Interpretations* of these Standards.

Because generally accepted accounting principles impact how companies report and what they report, all stakeholders are interested in the setting of these principles. Thus, standards are established according to a process that seeks and considers input from all affected parties. The standard-setting activities of the FASB are published and made available at <http://www.fasb.org>.

In this chapter and throughout this text, we emphasize accounting principles and concepts. It is through this emphasis on the "why" of accounting as well as the "how"

ACCOUNTING REFORM

The financial accounting and reporting failures of **Enron**, **WorldCom**, **Tyco**, **Xerox**, and others shocked the investing public. The disclosure that some of the nation's largest and best-known corporations had overstated profits and misled investors raised the question: Where were the CPAs?

In response, Congress passed the **Investor Protection, Auditor Reform, and Transparency Act of 2002**, called the **Sarbanes-Oxley Act**. The Act establishes a Public Company

Accounting Oversight Board to regulate the portion of the accounting profession that has public companies as clients. In addition, the Act prohibits auditors (CPAs) from providing certain types of nonaudit services, such as investment banking or legal services, to their clients, prohibits employment of auditors by clients for one year after they last audited the client, and increases penalties for the reporting of misleading financial statements.
