Srivastava,2009 **Geographical Information and Climatology** Pierre Carrega,2013-05-13 This book includes two parts The first part is more theoretical and general and it covers fundamental principles geospatial climate data measurement spatial analysis mapping and climate geographical information remote sensing and climatology and geographical information for initialisation of forecasting and climate models The second part describes geographical information used in various climate applications of importance today related to risk urban climate air pollution hydrological problems linked to climatology forest fires *Smart and Sustainable Power Systems* João P. S. Catalão,2017-12-19 The smart grid initiative integrating advanced sensing technologies intelligent control methods and bi directional communications into the contemporary electricity grid offers excellent opportunities for energy efficiency improvements and better integration of distributed generation coexisting with centralized generation units within an active network A large share of the installed capacity for recent renewable energy sources already comprises insular electricity grids since the latter are preferable due to their high potential for renewables However the increasing share of renewables in the power generation mix of insular power systems presents a significant challenge to efficient management of the insular distribution networks mainly due to the variability and uncertainty of renewable generation More than other electricity grids insular electricity grids require the incorporation of sustainable resources and the maximization of the integration of local resources as well as specific solutions to cope with the inherent characteristics of renewable generation Insular power systems need a new generation of methodologies and tools to face the new paradigm of large scale renewable integration *Smart and Sustainable Power Systems Operations Planning and Economics of Insular Electricity Grids* discusses the modeling simulation and optimization of insular power systems to address the effects of large scale integration of renewables and demand side management This practical book Describes insular power systems renewable energies uncertainty variability reserves and demand response Examines state of the art forecasting techniques power flow calculations and scheduling models Covers probabilistic and stochastic approaches scenario generation and short term operation Includes comprehensive testing and validation of the mathematical models using real world data Explores electric price signals competitive operation of distribution networks and network expansion planning *Smart and Sustainable Power Systems Operations Planning and Economics of Insular Electricity Grids* provides a valuable resource for the design of efficient methodologies tools and solutions for the development of a truly sustainable and smart grid **Evapotranspiration** Giacomo Gerosa,2011-11-09 This book represents an overview of the direct measurement techniques of evapotranspiration with related applications to the water use optimization in the

agricultural practice and to the ecosystems study Different measuring techniques at leaf level porometry plant level sap flow lysimetry and agro ecosystem level Surface Renewal Eddy Covariance Multi layer BREB are presented with detailed explanations and examples For the optimization of the water use in agriculture detailed measurements on transpiration demands of crops and different cultivars as well as results of different irrigation schemes and techniques i e subsurface drip in semi arid areas for open field greenhouse and potted grown plants are presented Aspects on ET of crops in saline environments effects of ET on groundwater quality in xeric environments as well as the application of ET to climatic classification are also depicted The book provides an excellent overview for both researchers and student s who intend to address these issues
