Martin Physical Pharmacy 5th Edition:

A Comprehensive Textbook of Pharmaceutics GENERAL PHARMACY (Theory) Dr Ankur Srivastava, Dr Deepti Dwivedi, Ms Deepika Kunwar, Dr Sadaf Afri, Dr Reetu Yadav, 2026-03-13 This book is designed in alignment with the New Education Policy NEP 2020 to build a strong conceptual and professional foundation for pharmacy students at the beginning of their academic journey. It introduces core aspects of the pharmacy profession: pharmaceutical dosage forms, basic pharmaceutical calculations, and the expanding role of pharmacists within modern healthcare systems. By integrating conceptual clarity with skill-oriented learning, the book prepares learners for advanced studies in pharmaceutical technology and pharmacy practice. The content is organized into five well-structured units that move systematically from the history, scope, and ethics of pharmacy in India to the scientific and practical principles underlying pharmaceutical preparations. Students are introduced to the evolution of pharmacy, pharmacopoeias, official standards, and professional responsibilities, followed by essential topics such as prescription handling, pharmaceutical calculations, and the formulation of solid, liquid, semisolid, and suppository dosage forms. In line with NEP 2020, the book emphasizes competency-based education by linking theory with application. It helps students develop calculation skills, understand the role of active pharmaceutical ingredients and excipients, gain hands-on insight into dosage form preparation and evaluation, enhance communication for patient counselling, and cultivate ethical and professional responsibility. Overall, the book supports holistic, multidisciplinary learning.

Pharmaceutical Suspensions Alok K. Kulshreshtha, Onkar N. Singh, G. Michael Wall, 2009-11-05 The suspension dosage form has long been used for poorly soluble active ingredients for various therapeutic indications. Development of stable suspensions over the shelf life of the drug product continues to be a challenge on many fronts. A good understanding of the fundamentals of disperse systems is essential in the development of a suitable pharmaceutical suspension. The development of a suspension dosage form follows a very complicated path. The selection of the proper excipients, surfactants, viscosity imparting agents, etc. is important. The particle size distribution in the finished drug product dosage form is a critical parameter that significantly impacts the bioavailability and pharmacokinetics of the product. Appropriate analytical methodologies and instruments, chromatographs, viscometers, particle size analyzers, etc. must be utilized to properly characterize the suspension formulation. The development process continues with a successful scale-up of the manufacturing process. Regulatory agencies around the world require clinical trials to establish the safety and efficacy of the drug product. All of this development work should culminate into a regulatory filing in accordance with the regulatory guidelines. Pharmaceutical Suspensions: From Formulation Development to Manufacturing in its organization follows the
