CENTER OF MASS

STUDY GUIDE

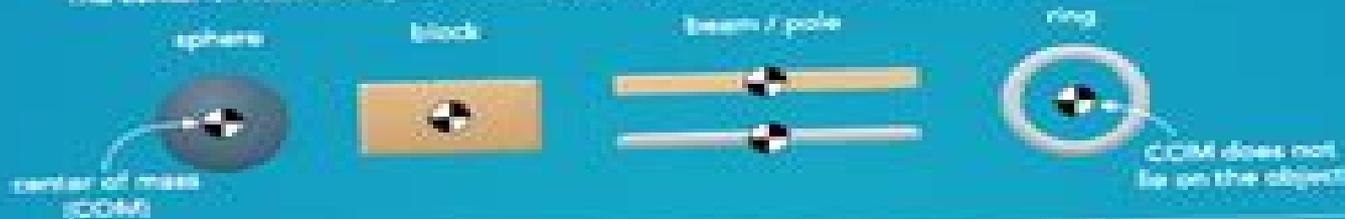

CENTER OF MASS

Center of Mass

- The center of mass (COM) of an object or a system of masses is the mass-weighted average position of an object or a system of masses.
- If an object is symmetrical and has a uniform density, the center of mass is located at the center of the object (the center of the width, length and height of the object).
- If an object is not symmetrical or does not have a uniform density, the center of mass moves closer to areas of the object with more mass.
- The center of mass of an object or a system does not have to be directly on the object and can be located in the empty space near the physical object(s).

Variables	SI Unit
x	x position
y	y position
m	mass
	kg

The center of mass of a symmetrical object with uniform density is located at the center of the object.

The center of mass of an asymmetrical object is located closer to areas with more mass.
