Johnson, 2010-12-31 *The Elements of MATLAB Style* is a guide for both new and experienced MATLAB programmers It provides a comprehensive collection of standards and guidelines for creating solid MATLAB code that will be easy to understand enhance and maintain It is written for both individuals and those working in teams in which consistency is critical This is the only book devoted to MATLAB style and best programming practices focusing on how MATLAB code can be written in order to maximize its effectiveness Just as Strunk and White's *The Elements of Style* provides rules for writing in the English language this book provides conventions for formatting naming documentation programming and testing It includes many concise examples of correct and incorrect usage as well as coverage of the latest language features The author also provides recommendations on use of the integrated development environment features that help produce better more consistent software *Accelerating MATLAB Performance* Yair M. Altman, 2014-12-11 The MATLAB programming environment is often perceived as a platform suitable for prototyping and modeling but not for serious applications One of the main complaints is that MATLAB is just too slow *Accelerating MATLAB Performance* aims to correct this perception by describing multiple ways to greatly improve MATLAB program speed Packed with the *A Practical Guide to Error-control Coding Using MATLAB* Yuan Jiang, 2010 Offers engineers with a comprehensive understanding of error control coding an essential and widely applied area in modern digital communications This book includes such codes as block Reed Solomon convolutional turbo and LDPC codes **Programming in MATLAB** Patel, Mittal, 2014 MATLAB provides an interactive programming interface for numerical computation and data visualization making it the default framework used for analysis design and research in many domains of science and industry *Programming in MATLAB* A problem solving approach is intended as an aid to engineers and scientists with no prior programming expertise The book focuses on the systematic development of practical programming skills through MATLAB language constructs backed by several well designed examples and exercises Designed to be as much a MATLAB reference tool for researchers in varied fields as it is a guide for undergraduate readers the book builds on the concepts sequentially as it progresses through the chapters Each chapter is complete independent of the book's remaining contents Thus for teaching

purposes one can suitably the relevant portions *An Introduction to Programming and Numerical Methods in MATLAB* Stephen Robert Otto, James P. Denier, 2005-05-03 An elementary first course for students in mathematics and engineering Practical in approach examples of code are provided for students to debug and tasks with full solutions are provided at the end of each chapter Includes a glossary of useful terms with each term supported by an example of the syntaxes commonly encountered

MATLAB and Simulink Code Generation F Marquez, 2019-04-07 Generating code from MATLAB algorithms for desktop and embedded systems allows you to perform your software design implementation and testing completely within the MATLAB workspace You can Verify that your algorithms are suitable for code generation Generate efficient readable and compact C C code automatically which eliminates the need to manually translate your MATLAB algorithms and minimizes the risk of introducing errors in the code Modify your design in MATLAB code to take into account the specific requirements of desktop and embedded applications such as data type management memory use and speed Test the generated code and easily verify that your modified algorithms are functionally equivalent to your original MATLAB algorithms Generate MEX functions to Accelerate MATLAB algorithms in certain applications Speed up fixed poin MATLAB code Generate hardware description language HDL from MATLAB code To generate C C or MEX code from MATLAB algorithms you must install the following software MATLAB Coder product C C compiler When writing MATLAB code that you want to convert into efficient standalone C C code you must consider the following Data types C and C use static typing To determine the types of your variables before use MATLAB Coder requires a complete assignment to each variable Array sizing Variable size arrays and matrices are supported for code generation You can define inputs outputs and local variables in MATLAB functions to represent data that varies in size at run time Memory You can choose whether the generated code uses static or dynamic memory allocation With dynamic memory allocation you potentially use less memory at the expense of time to manage the memory With static memory you get better speed but with higher memory usage Most MATLAB code takes advantage of the dynamic sizing features in MATLAB therefore dynamic memory allocation typically enables you to generate code from existing MATLAB code without modifying it much Dynamic memory allocation also allows some programs to compile even when upper bounds cannot be found Static allocation reduces the memory footprint of the generated code and therefore issuitable for applications where there is a limited amount of available memory such aembedded applications
