Zieliński, 2021-01-29 This hands on laboratory driven textbook helps readers understand principles of digital signal processing DSP and basics of software based digital communication particularly software defined networks SDN and software defined radio SDR In the book only the most important concepts are presented Each book chapter is an introduction to computer laboratory and is accompanied by

complete laboratory exercises and ready to go Matlab programs with figures and comments available at the book webpage and running also in GNU Octave 5.2 with free software packages showing all or most details of relevant algorithms. Students are tasked to understand programs, modify them, and apply presented concepts to recorded real RF signals or simulated received signals with modelled transmission conditions and hardware imperfections. Teaching is done by showing examples and their modifications to different real world telecommunication like applications. The book consists of three parts: introduction to DSP spectral analysis and digital filtering; introduction to DSP advanced topics: multi-rate, adaptive, model-based, and multimedia speech audio video signal analysis and processing; and introduction to software defined modern telecommunication systems: SDR technology, analog and digital modulations, single and multi-carrier systems, channel estimation and correction, as well as synchronization issues. Many real signals are processed in the book: in the first part mainly speech and audio, while in the second part mainly RF recordings taken from RTL SDR, USB stick, and ADALM-PLUTO module, for example, captured IQ data of VOR avionics signal, classical FM radio with RDS, digital DAB, DAB radio, and 4G LTE digital telephony. Additionally, modelling and simulation of some transmission scenarios are tested in software in the book, in particular TETRA, ADSL, and 5G signals. Provides an introduction to digital signal processing and software based digital communication. Presents a transition from digital signal processing to software defined telecommunication. Features a suite of pedagogical materials including a laboratory test bed and computer exercises/experiments.

Thierry Dutoit, Ferran Marques, 2010-06-10 Applied Signal Processing: A MATLAB Based Proof of Concept benefits readers by including the teaching background of experts in various applied signal processing fields and presenting them in a project oriented framework. Unlike many other MATLAB based textbooks which only use MATLAB to illustrate theoretical aspects, this book provides fully commented MATLAB code for working proofs of concept. The MATLAB code provided on the accompanying online files is the very heart of the material. In addition, each

chapter offers a functional introduction to the theory required to understand the code as well as a formatted presentation of the contents and outputs of the MATLAB code Each chapter exposes how digital signal processing is applied for solving a real engineering problem used in a consumer product The chapters are organized with a description of the problem in its applicative context and a functional review of the theory related to its solution appearing first Equations are only used for a precise description of the problem and its final solutions Then a step by step MATLAB based proof of concept with full code graphs and comments follows The solutions are simple enough for readers with general signal processing background to understand and they use state of the art signal processing principles Applied Signal Processing A MATLAB Based Proof of Concept is an ideal companion for most signal processing course books It can be used for preparing student labs and projects
