How much water is fresh water?

2.5 %

What is virtual water?

Virtual water is the volume of water used to produce consumer products. The total volume of water refers to all of the water used in the production of a product. For example, the total volume of water used in a food product would include the water used in the agricultural process, but also the water used in packaging and shipping. Virtual water is essentially all of the "hidden" water behind a product.

What is grey water?

Greywater is used household water sourced from baths, showers, bathroom basins and laundries, but excludes water from the toilet (which is regarded as 'blackwater'). Generally, greywater from the kitchen is not recommended for reuse due to the high levels of organic materials such as oils and fats.

What is green water?

the water supply held around the roots of the plants.

what is a non-renewable resource?

A non-renewable resource is a natural substance that is not refilled with the speed at which it is consumed. It is a limited resource.

What is a renewable resource?

A renewable resource is one that can be used repeatedly and does not run out because it is naturally replaced.

What is a continuous resources?

Continuous resources are those that will virtually always exist
