## Student Exploration: Bohr Model of Hydrogen

**Vocabulary:** absorption spectrum, Bohr model, electron volt, emission spectrum, energy level, ionization energy, laser, orbital, photon

*[Note to teachers and students: This Gizmo was designed as a follow-up to the Bohr Model: Introduction Gizmo. We recommend doing that activity before trying this one.]*

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

- What happens to an electron when it absorbs a tiny packet of light called a **photon**?  
the electron absorbs the energy from it, causing a higher energy level
- What happens to an electron when it emits a photon?  
the electrons lose energy, causing a lower energy level

### Gizmo Warm-up

When white light is passed through hydrogen gas and separated by a prism, some wavelengths of light are absorbed by the hydrogen atoms in the gas. This causes black bars to appear in the **absorption spectrum** of hydrogen. An **emission spectrum** is created when hydrogen gas emits light.

The **Bohr model** of the atom was inspired by the spectrum produced by hydrogen gas. The link between light and atomic structure is illustrated by the *Bohr Model of Hydrogen* Gizmo. The Gizmo shows a **laser** pointed at a container of hydrogen gas. After passing through the gas, light from the laser goes through a prism and is detected on a screen.

- With the **Laser energy** set to 7.0 eV, click **Play** (▶). Observe the blue electron on the **ORBITALS** pane. Do 7.0-eV photons have any effect on the electron? **No, it doesn't, the electron stays at lvl 1.**
- Click **Pause** (⏸). Set the **Laser energy** to 12.1 eV and click **Play**. What happens to the electron now? **the electron shakes up and down and moves up by 2 orbital (level 3 )**
- Under **Go to energy level**, select **1**. Notice that a photon is emitted by the electron. What is the energy of the emitted photon? **(12.1 eV)**
